THIRTY-NINTH
ANNUAL REPORT

OF THE

REGISTRAR-GENERAL

OF

BIRTHS, DEATHS, AND MARRIAGES

IN ENGLAND.

(ABSTRACTS OF 1876.)

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:

PRINTED BY GEORGE E. EYRE AND WILLIAM SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.
FOR HER MAJESTY'S STATIONERY OFFICE.

CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1876.

REPORT :—	PAGES
PROGRESS and ECONOMIC VALUE of the ENGLISH POPULATION	v-xi
EMIGRATION from the UNITED KINGDOM	xi-xiii
INCREASE of POPULATION	xiii
METEOROLOGY at GREENWICH; PRICES of WHEAT and MEAT; NUMBER and VALUE of ANIMALS IMPORTED, and QUANTITY of MEAT IMPORTED; PAUPERISM	xiii-xv
MARRIAGES; Marriage-rate; Number celebrated according and <i>not</i> ac- cording to the Rites of the Established Church; Previous condition of Persons married; Ages of Persons married; Marriages of Minors; Signatures in Marriage Registers; Educational condition of different Counties, as shown by the Signatures of Marriage Registers; Buildings registered for the Solemnization of Marriages; Certified Places of Worship; Designations of Religious Bodies	xv-xxiii
BIRTHS. Number registered; Birth-rate; Children born out of Wedlock	xxiii-xxvi
DEATHS. Number registered; Death-rate; Mortality in Town and Country; Mortality of Males and Females at various Ages; Seasons; Locality; Mortality of Children under One Year of Age in Eng- land and in 18 large Towns. Death-rate of Children under Five Years of Age in 17 large Towns. Deaths in Public Institutions in England and in London	xxvi-xxxv
PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CER- TIFICATES granted at the CENTRAL OFFICE	xxxv, xxxvi
UNITED KINGDOM. Population, Emigration, Marriage, Birth, and Death Rates	xxxvi
THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD	xxxvii
THE NAVY. STRENGTH and MORTALITY of the NAVY	xxxvii-xxxviii
BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY by DROWNING in the MERCHANT SERVICE compared with that in the ROYAL NAVY	xxxviii, xxxix
WILLS. Numbers and Values of Probates and Administrations; Calendars of Grants of Probate and Administration kept at the General Register Office	xl
EUROPEAN STATES. Marriage, Birth, and Death Rates; Some Results of the Census of France in 1876	xl-xliii
METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S.	xliv-xlvi
PRELIMINARY TABLES	xlvi-cxvi

ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions, Counties, and Districts; distinguishing those according and those <i>not</i> according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks	2-25
AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows	26-28
MARRIAGES, BIRTHS, and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also BIRTHS and DEATHS and EXCESS of BIRTHS over DEATHS in each of the Sub-districts of England; distinguishing the Sexes and Illegi- timate Births throughout	30-84

ABSTRACTS—*continued*.

	PAGES
BIRTHS Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	86-89
BIRTHS of Children born out of Wedlock Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	90-93
DEATHS Registered in DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	94-97
DEATHS of Males and Females in Public Institutions	99-119
DEATHS of Males and Females at different AGES Registered in DIVISIONS, COUNTIES, and DISTRICTS	122-143
CAUSES of DEATH of Males and Females in ENGLAND at different Periods of Life	146-155
CAUSES of DEATH of Males and Females in LONDON at different Periods of Life	156-161
CAUSES of DEATH of Males and Females in ENGLAND, and in each of the DIVISIONS and COUNTIES	162-185
DEATHS from SEVERAL ZYMOTIC and OTHER CAUSES, and INQUEST CASES, in the DIVISIONS, COUNTIES, and DISTRICTS of ENGLAND	186-197
VIOLENT DEATHS in ENGLAND, distinguishing SEX and AGE	198-204
VIOLENT DEATHS in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	205-211
DEATHS returned as having occurred from SUICIDE in ENGLAND, distinguishing SEX and AGE	212-213
DEATHS returned as having occurred from SUICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	214, 215
DEATHS returned as having occurred from MURDER and INFANTICIDE in ENGLAND, distinguishing SEX and AGE	216, 217
DEATHS returned as having occurred from MURDER and INFANTICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	218
DEATHS returned as having occurred from MANSLAUGHTER in ENGLAND, distinguishing SEX and AGE	219, 220
DEATHS returned as having occurred from MANSLAUGHTER in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	221

APPENDIX.

LETTER TO THE REGISTRAR-GENERAL ON THE CAUSES OF DEATH IN ENGLAND, BY WILLIAM FARR, Esq., M.D., F.R.S.:—

CAUSES OF DEATH	225-226
(1) <i>Zymotic Diseases</i>	226-239
(2) <i>Constitutional Diseases</i>	239
(3) <i>Local Diseases</i>	239-240
(4) <i>Developmental Diseases</i>	241-251
(5) <i>Violence</i>	251
Effect of Atmospheric Vicissitudes on the Mortality	252-255
Causes of Death of Children under One Year of Age	255-257
TABLES	258-292

INDEX of DISTRICTS, SUB-DISTRICTS, and of certain TOWNS, referring to Numbers used in the several TABLES of ABSTRACTS	293-307
ALPHABETICAL INDEX to REPORT, TABLES, and APPENDIX	308-324

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,
30th March 1878.*

(1876.)

SIR,

I HAVE the honour to submit to you my *Thirty-ninth* Annual Report. The Amendment Act introduced by you came into operation on 1st January 1875 ; and I have to state that the various changes, of which I gave some account in the last Report, have worked satisfactorily. Registration is more complete than it was, and I believe more accurate. This is especially the case with the births, of which registration was rendered compulsory. The birth register is of so much use to the child all through life that the neglect of the parent to procure it is criminal.

I propose now to give a brief account of the registered additions to the population since 1st July 1837, when civil registration began ; and to determine as nearly as I am able how far the number of children registered falls short of the number of children born alive. The facts prove that the defects were diminishing before the law was enforced by penalties ; and now with due vigilance the registration of births as well as of deaths will, I believe, be in England as complete as it is in any other country in Europe.

Looking back from the first complete year of registration to the last, the annual births were 463,787 in 1838 and 887,968 in 1876 ; and the new births actually recorded from 1st July 1837 on the national registers were 26,129,906. There were in the first year 30·3 births registered to every 1,000 inhabitants, in the last year 36·6 ; and after allowing for any natural increase of the rate in the interval, or any deficiency of registration in the last year of all, I am inclined to think the actual birth-rate of living children was 36 per 1,000 during the 39½ years of civil registration. At this rate besides the 26,129,906 births registered therefore 1,441,603 births remained unregistered, or about 5 in 100.

The births were diminished by 17,079,018 deaths,* which after subtraction left an excess in the numbers added to the population of 10,492,491 ; about 1,200,609 more than the increase of the home population determined from the censuses. The 1,200,609 must have left England by emigration in excess of immigration. There were in *England and Wales* in the middle of 1837 about 15,103,778 people ; and at the end of 1876 more by 9,291,882 new comers, making in the aggregate 24,395,660 inhabitants on 31st December 1876.

The emigration from Scotland and Ireland has been in proportion to their population more extensive than the emigration from England ; and certain numbers of the population of England are of Scotch or Irish birth or descent. Consequently as the population in Ireland—not the Irish people—decreased, the increase of the population in the UNITED KINGDOM was less than the increase of the population during the same time in England and Wales. The increase of population in the UNITED KINGDOM,

* The mortality was 2·23 per cent., see p. xlix.

exclusive of the islands in the British seas, in the 39·5 years was 7,619,759.* I leave out of account here the numbers of the army, navy, and merchant seamen abroad, the English, Scotch, and Irish residing in other countries, as well as the immense number of living emigrants and their descendants in the Colonies and in the United States.

The population of the UNITED KINGDOM increased in the 39 years 1837–1876 at the rate of 29 per cent.†; and in the last ten years at the rate of 10 per cent. The increase in the last ten years was at the rate of 0·94 per cent. per annum. It was 0·66 per annum during the whole 39 years.

Various attempts have been made to estimate the amount, and the increase of the capital of the United Kingdom. The most recent attempt of the kind has been made by the chief of the statistical department of the Board of Trade. The value of the most important part of the capital of the United Kingdom and its increase have yet to be determined; I mean the economic value of the population itself. To that I propose to call attention briefly.

As lands, houses, railways, and the other categories in the income tax schedules are of value, because they yield annual returns; so for the same reason, and on the same principle the income of the population derived from pay of every kind for professional or other services, and wages can be capitalized; not precisely, it is true, unless the income of every person living were returned at least as nearly as the incomes subject to income tax; but sufficiently near to the true value to show that the value of the population itself is the most important factor in the wealth of the country.

It will be sufficient to state here that the capitalization of personal incomes always proceeds upon the determination of the present value at any age of the *future annual earnings* at that and all future ages; hence the Value of future wages rises from the date of birth, when it is a notable quantity; is highest in the labouring classes at the age of 25; and declines as age advances, until in extreme age when no wages are earned, it disappears. The living by the Life Table are most numerous in childhood, and gradually fall off till they are all extinct; and so in the population enumerated at the Census the numbers decline from the first year to the ultimate year of age. While the rates of wages rise rapidly from birth to the age of manhood, and afterwards decline, the numbers living constantly

* PROGRESS of the POPULATION of the UNITED KINGDOM in 39½ Years.

—	UNITED KINGDOM. (U.K.=E. W. S. I.)	GREAT BRITAIN. (G.B.=E. W. S.)	ENGLAND AND WALES. (E. W.)	SCOTLAND. (S.)	IRELAND. (I.)
Middle of 1837	25,650,426	17,626,431	15,103,778	2,522,653	8,023,995
End of 1876 -	33,270,185	27,939,923	24,395,660	3,544,263	5,330,262
Increase in } 39½ Years }	7,619,759	10,313,492	9,291,882	1,021,610	{ (Decrease.) 2,693,733

Note.—The population of the Islands in the British Seas, and the numbers of the Army, of the Navy, and of the Merchant Service abroad, here omitted, amounted—
in 1841 to 325,896
in 1871 to 369,244

Increase 43,348

† The births and deaths have only been registered in recent years in Ireland; in England while the deaths have been accurately registered from the first, the registration of births has only recently been made compulsory. The birth rates of England are given year by year (see Preliminary Tables, No. 2, p. xlix.) ; and it will be seen (see Preliminary Tables, No. 50, p. xcv.) that the rate last year was 36·5 in Great Britain; in Ireland it was only 26·4, partly through defective registration and partly from other causes. In England the death-rate was 22·3 per 1000 in the 39½ years; and the birth-rate during the same period may be set down at 36·0. Applying these rates as fairly applicable to the population of the United Kingdom, exclusive of the Islands in the British seas the births were 41,079,483; the deaths were 25,446,457; leaving an excess of 15,633,026 births. The excessive deaths in Ireland in the year of famine were, I believe, counterbalanced by the reduced mortality in other years.

decline. Taking a series of observations on the wages of agricultural labourers* some years ago at different ages ; determining their value by a Life Table at five per cent. rate of interest for each age ; and multiplying the numbers living by these values, it is found that the mean gross value at all ages is 349*l.* But the mean value of the subsistence of the labourer as child and man, determined by the same method, is about 199*l.* ; and deducting this sum from 349*l.*, there remain 150*l.* as the mean net value of the male population, estimated by this standard of the *agricultural labourer*. To extend the value to the whole population, including females, the standard might be lowered from 150*l.* to 110*l.* a head.

Then multiplying the population of the United Kingdom by 110 we have as the aggregate value £3,640 million ; this including only as much of the income as approximates in annual amount to the wages of agricultural labourers. Only a small part of it is subject to assessment under the income tax schedules. The gross assessment under the income tax affords the means of estimating the value of incomes exceeding 100*l.* a year under schedules D. and E. ; excluding companies, mines, and works, these profits and salaries amount to £214 million a year, to which about £92 million a year may be added for incomes above 30*l.* and below 100*l.* a year ; thus making the aggregate of such incomes £306 million a year ; which when the assessments of B. (farmers') are added becomes £373 million a year. Deduct the *half* of this revenue as due to external capital, and as required for the necessary sustenance of farmers, tradesmen, and professional men and there remain £186½ million a year as pure profit ; which cannot be capitalized as a perpetuity inasmuch as the interest is limited by the lives of the producers, but taking life contingencies into account may be capitalized at ten years' purchase. This makes the value of these incomes £1,865 million. Allowing £255 million for the part of the incomes of about a million people paying the income tax previously valued in the £3,640 million, and for other deductions, £1,610 million remain, which, added to the £3,640 million already obtained, make £5,250 million.†

Thus by capitalizing the earnings, fees, salaries, wages of the professional, mercantile, trading, and working classes, £5,250 million are obtained as an approximation to the value which is inherent in the people, and may be fairly added to the capital in land, houses, cattle or stock, and other investments. The amount would be increased by taking into account the rise of wages, and the income omitted in the returns of Schedule D. With an industrial census an accurate estimate can be made of this most important part of the capital of the country.

The minimum value of the population of the United Kingdom, men, women, and children, is 159*l.* a head ; that is the value inherent in them as a productive, money-earning race. The incomes chiefly under schedules D., E., and B., raise the mean value from 110*l.* to 159*l.* (see above).

Again it must be borne in mind that the value under Schedule A. is dependent upon the population ; where there is little population land itself is of little value. The increase of the value of house property is directly due to the increased numbers and earnings of the inhabitants. The railways yield no profit where there is no population. The profits of quarries, mines, ironworks (Schedule D.), and other concerns are mainly due to the skill and industry of the masters and men who work them. Upon the other hand the products of human industry are multiplied a hundredfold by the tools, machinery, steam power, and all the appliances which capital commands and represents. Should the population of a country decay, the value of its capital might sink to the vanishing point.

What I wish further to point out is that during the 39½ years this office has existed there have been added to the population of the United Kingdom 7,619,759 people, who valued as land is valued by the annual yield of

* See Journal of the Statistical Society, Vol. xvi., pp. 42-43.

† Mr. Giffen makes the value of the capital in other forms £8,500 million ; making with the value of the population itself, £13,750 million. See Journal of the Statistical Society, Vol. xli., pp. 1-31.

net profit, constitute an addition of £1,212 million to the wealth of the nation.

The value of labour—that is of working men—varies, and is greatest where there is the greatest facility for profitable use, and where it is in greatest demand. Thus a large stream of the population of England flows to the Metropolis; and England is to the United Kingdom what the Metropolis is to England. So the populations of Ireland and Scotland flow into England, where they find more profitable employment, and are of more value than they are at home.

For the same and other reasons large armies of the population of the United Kingdom passed into the colonies and the United States; during the thirty-nine and a half years (1837–76) the excess of births over deaths was nearly 16 millions, of which nearly 8 millions augmented the ranks of the population at home, and more than 8 millions settled in other lands; chiefly in the midst of the old English stock of the United States and in the Colonies extending from Canada in America, to Africa and to Australasia.

Of the 8,013,267 people who must have left the country, only about 6,580,000 are accounted for by the Emigration Commissioners, whose returns were imperfect in two ways; they neither included the whole of the emigrants nor recognised emigrants returning recently in large numbers.*

The emigrants are chiefly adults married and unmarried; the men greatly exceeding the women in number. A few infants accompany their parents. Valuing the emigrants as the agricultural labourers have been valued at home—taking age and service into account—the value of emigrants in 1876 was 175*l.* per head.

If we may venture to apply this standard to the whole period it will follow that the money value of the 8,000,000 people that left England, Scotland, and Ireland in the years 1837–76, was £1,400 million, or on an average about 35,000,000*l.* a year. In round numbers taking into account their aptitude to earn wages in future years at the home rates the annual industrial army that went out was worth at starting 35,000,000*l.* Many of the emigrants are skilled artisans, and considerable numbers are returned as farmers, gentlemen, professional men, and merchants; some of whom no doubt carried away a certain amount of capital which is not here brought into account.

The policy of the people of this country has thus been a policy of progress; instead of resting as they were in 1837, they have added since that year on an average 192,873 souls annually to the population at home, and sent 202,868 sons and daughters to seek their fortune abroad in other fields of labour. The women, instead of 644,214 children, who would just replace the population removed by deaths, have given birth to 1,039,987 annually, at a certain loss of their own lives with intermingled sorrows and joys such as befall mothers in rearing children: while the men instead of expending the whole of their gains on themselves have devoted a large share to their wives and families; besides that as we have seen the external wealth of the country has increased as the nation has without conquering territory or levying heavy contributions on its European neighbours.

The value of men varies with their earnings, which differ considerably in the colonies from the earnings of agricultural labourers at home; and on the whole before the civil war the emigrants to the United States got higher wages, and at the same time gave a higher value to the territory.

It may be contended that emigration is a loss to the mother country. It seems so. It is like the export of precious goods for which there is no return. But experience proves that simultaneously with this emigration there has been a prodigious increase of the capital of the country, especially in recent years. Wages have risen, and the value of the labourer has risen in proportion. In Norfolk where wages are intermediate between the rates in the north and south the rise has apparently been about 20 per cent.; so

* See Census Report 1871, where this was first demonstrated, and Emigration Report 1877.

a fifth may be added to the estimated value of the workman. When the man leaves the village where he was born and bred, he leaves the market open to his fellows; he removes to a field where his work is in demand, and carries his fortune with him. It is the same when he emigrates to the colonies. His parents in rearing him have expended their gains in the way most agreeable to themselves. They have on an average five children, instead of two or three, or none. Taking a wider view, the emigrants create articles of primary use with which in exchange they supply the mother country; they have sent to England in the 39 years wheat, cotton, wool, gold to the value of hundreds of millions. What is of still more vital importance, they grow into new nations; they multiply discoveries; by confederation they will be to the Anglo-Saxon race outposts of strength across the Atlantic, in the Pacific, in South Africa, and in Australasia on the flank of India. And, moreover, to all it is an advantage to speak a wide spread language, and thus to be in social, literary, and scientific communion with millions of the same race. The increasing numbers enable them, advanced as they are in the arts, in the sciences, and in civil government, to do more for the good of kindred races; and to endow them with advantages which could not be attained in other ways for centuries. They govern India.

The economic value of a population depends very much on their command over the powers of nature; which they acquire by education. Put barbarians in possession of the land, the mines, the manufactures, the machines, the ships, the triumphant position of these islands on the sea between two continents, and what would be the result? Another Asia Minor, Egypt, or Syria? The better educated the English people become, the more skilful they will become, and the more valuable in an economic sense they will be. The clever artisan is worth more than the rude labourer. Now the art of reading and writing their own language is by no means proof of complete education, or of any technical training, but it is a proof that men in possession of it are preparing to enter on the heritage of thought, and knowledge, and sentiment, which men of all ages have bequeathed to mankind, and which is enshrined in the writings of an admirable language.

In 1837 not more than 58 in 100 men and women possessed this art; but there has been progress, and I have year by year assiduously noted the increase of their numbers in the 39 years, so that I am now able to report, that instead of 58, *eighty-one* in a hundred write their names in the marriage registers.

It is evident that there are other elements on which the economic value of the working population depends; and foremost among them stand health and long life. The longer men live, and the stronger they are, the more work they can do. Epidemic diseases in rendering life, render wages, insecure. These diseases are most fatal in cities whither the population—to secure all the advantages of the division of labour—have been congregating every year in increased numbers: villages have become populous or have grown into towns; so the population has been growing denser. And that by a definite law, other things being equal, tends to increase weakness, sickness, and mortality. There have been counteracting agencies in operation in the *thirty-nine* years. Asiatic cholera was epidemic in England in 1831–2; influenza followed at intervals in 1833, 1837, and 1847; and laid thousands of the population low; in 1848–9 the cholera epidemic in England and Wales alone was fatal to *fifty-three thousand people*;* its ravages in every corner of the kingdom were described; the conditions of its diffusion and fatality were brought to light, and the further investigations of the slighter epidemics of 1854 and 1866 prove that this plague is under the control of science. Other epidemics have since been fatal especially to children, and fever has struck at princes and peers as well as peasants; but upon the whole the great zymotic diseases have been quelled. Plague in its various forms has been kept at bay by a series of defences based upon minute precau-

* Registrar General's Report on Mortality of Cholera in 1848–9.

tions. In some epidemics I found it necessary to publish daily particulars respecting deaths in the Metropolis. By pursuing such inquiries, year after year, not only many of the causes that induce sickness and destroy life have been discovered, but observations of the same kind have shown that their removal has been followed by health and longer, more vigorous life. The economic value of the population of several towns has been increased by sanitary measures. The truths established, the facts ascertained, the remedies discovered in the thirty-nine years past await their full administrative applications in the years to follow ; and the savings of time wasted in sickness, as well as of precious lives prematurely lost in youth and manhood, will enhance the value of the population to an incalculable extent. The famines so fatal in Ireland are not likely to recur ; part of the population has emigrated to England or to America, and the intelligent landowners of Ireland through the extension of the Poor Law now insure their countrymen against death by starvation. The same beneficent law has in the thirty-nine years been extended to the Highlands of Scotland. Every improvement in health recorded makes it clearer and clearer that the gloom of sickness and premature death flies away before sanitary measures ; and when the qualified health officers whom the Universities are offering to examine, are in suitable positions under enlightened local authorities all over the country they will no doubt prove as efficient in preventing as their medical brethren are in treating sickness. The result on human happiness cannot be calculated ; but a future Industrial Census will show in a very definite shape its effect in raising the economic value of the population. The mean lifetime by the English Life Table is 40·86 years ; by the Healthy Life Table it is 49·0 years, which is attainable in every well organized State. It is fair to assume that if a fifth part be added to the mean lifetime, at least a fifth part will be added to the worth of a living and labouring population. Upon this estimate £1,050 million will be added to the economic value of the population of the kingdom. Its value will increase with its numbers, and so will the value of its emigrating thousands.

The increase of the population and of the wealth of Europe has been going on in the 39 years simultaneously with the increase of the United Kingdom ; but its wealth at a slower rate. In watching over, and thus in endeavouring to promote, the general health, I have invited the co-operation of the authorities of all the great cities, and I have met with the most cordial response ; thus, Vienna, Berlin, and Paris first gave in their adhesion ; Rome, and finally St. Petersburg followed. France, Switzerland, Belgium, Holland, Denmark, Sweden, Norway, Russia, Germany, Austria, Hungary, Italy, Egypt, have taken part in this movement ; Turkey is the only power that has stood aloof. As the outbreak of an epidemic in any one of the States of Europe may extend wide like a conflagration so there is a solidarity among them ; and every capital city has its watch-tower. It has been particularly gratifying to have associated with me in this enterprise, out of Europe, the three great cities of India ; and three great representative cities of our brethren across the Atlantic.

There is now a generous rivalry among all these States ; city is competing with city in salubrity. They are instituting comparisons with each other. And as the glory of armies in the field is measured by the number of their foes slain and wounded so the glory of municipalities is measured by the number of lives saved and victims of fever rescued by their hygienic strategy. The numerical tests are growing more definite and are used more frequently every day. Every day discoveries made in one country are made the common property of all ; as the railways and telegraphs, so the discoveries of Jenner, of Snow, of all sanitary workers, are become European property. Every race benefits by the well-being of other races ; and in these struggles for a better life English, French, German, Italian, and Russian nations can do each other no injury. They are brethren.

I now proceed to show in some detail the facts for England and Wales relating to birth, marriage, and death in the year, as compared with the state of things in other years, and in other countries. The Tables will

show the local authorities and men of science a great many particulars respecting the divisions, counties, districts, and sub-districts into which the country has been divided.

I shall first notice the emigration of population.

*Emigration from the United Kingdom.**—During the year 1876 the number of emigrants continued to decline, while the influx of immigrants was nearly as great as in the previous year.

In the annexed table it will be observed that the total emigration in 1876 was the lowest on record during the 14 years 1863–76.

TABLE 1.—EMIGRANTS of VARIOUS NATIONALITIES, 1863–1876.

YEARS.	Of British origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	28,619	6,291	209,801

1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	105,293	22,935	74,283	202,511	48,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,490	20,286	60,496	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,347	1,787	173,809
1876	73,396	10,097	25,976	109,469	25,584	3,169	138,222

The total number of emigrants in 1876 was 138,222, against 173,809 in the previous year, but the number of emigrants of *British origin*, after adding a certain proportion of 3169 whose birthplaces were not distinguished was 112,045 (against 142,112 in the previous year, showing a decrease of 30,067), of whom 75,435 were English, 10,281 Scottish, and 26,329 Irish.

TABLE 2.—NATIONALITY of BRITISH EMIGRANTS, 1853–1876.

PERIOD.	Of 100 Emigrants of British origin, the Number of each Nationality.		
	English.	Scotch.	Irish.

„ 1866–70 - -	43	10	47
„ 1871–75 - -	56	10	34
Year 1876 - - - -	67	9	24

One of the most remarkable features in the returns of 1876 is the comparatively small number of Irish who emigrated, chiefly to the United States, the proportion being only 24 per cent., against 34 per cent. in 1871–5, and 58 per cent. in 1861–5.

* These results only relate to the movement of population between the United Kingdom and places out of Europe. See Mr. Giffen's report to the Board of Trade relating to Emigration and Immigration from and into the United Kingdom in 1876.

While emigration to Australasia during the last two or three years had been comparatively steady, that to the United States and to British North America had greatly diminished, indeed nearly the whole of the great falling off in the number of emigrants in 1876 occurred among those bound for the United States and for British North America. As regards the diminution of emigrants to the United States and to British North America, Mr. Giffen remarks that emigration for *permanent settlement* had fallen to the smallest dimensions if it had not altogether been suspended.

The number of emigrants of British origin who proceeded to all other places, chiefly to the Cape of Good Hope, to Natal, and to South America, was 13,384, and differed but little from the number in the previous year.

Year 1876 - -	54,554	50	9,335	9	32,196	29	13,384	12	109,469

No correction has been made in the above table for those whose nationality was not distinguished.

The net annual loss of population at the *different ages* is unknown. For Australasia, however, whence the number of immigrants is comparatively small, it appears that the proportion of adult emigrants was about 79 per cent. of those whose ages were stated. The majority of the adult male emigrants to Australasia were labourers, and the majority of the single adult female emigrants were domestic servants.

The total immigrants in 1876 were 91,647, of whom 71,404 were of British origin. The number of emigrants of British origin was 109,469, the net loss, therefore, in 1876 was 38,065, which is probably less than in any previous year since the Irish exodus.

The records of immigration being much more complete for the year 1876 than for any previous year, the results in the subjoined table showing the balance of the account for persons of British origin will be studied with interest.

TABLE 4.—EXCESS of EMIGRANTS over IMMIGRANTS of BRITISH ORIGIN in 1876.

* Omitting immigrants at Plymouth whose nationalities were not distinguished.

The number of foreigners, after adding a certain proportion of those whose nationality was not distinguished, who passed through the United Kingdom to their destination in 1876 was 26,177, against 31,697 in 1875.

Increase of Population.—The natural increase of population in England and Wales in 1876, derived from the excess of births over deaths, was 377,653. The net loss to the population of the United Kingdom by excess of emigration over immigration was 38,065, about 73 per cent. of which (27,787) probably represents the proportion belonging to England and Wales. This number deducted from the natural increase of population gives 349,866 as the net gain in 1876, which approximates to the increase of population (301,425) during the twelve months, estimated from the actual rate of increase during the 30 years 1841–71.

Meteorology.—The most noteworthy phenomena of the year 1876 were heavy and frequent snowstorms throughout the country, and long periods of low barometer readings in March and December.

The severest snowstorm of the winter occurred on 14th April, when snow fell everywhere, and in such quantities in some parts as to overthrow a large number of telegraphic posts, so that telegraphic communication was stopped in many localities, and traffic generally impeded; some snow drifts were of great depth.

During the 57 days from the 5th February to the 1st April, with the exception of two days, the barometer readings were all below their averages, and at times were as much as one inch below the average for two and three days together. In the month of December, exclusive of four days, the readings were also below their averages, and on many days more than an inch below.

Frequent variations of temperature occurred during the year. Dividing the twelve months into well marked periods when the mean daily temperature was either in excess or defect of the average, it may be said that there were seven cold and eight warm periods. The mean temperature of the air for the year was $50^{\circ}\cdot 1$ or $1^{\circ}\cdot 3$ in excess of the average of 105 years.

The rain-fall for the five months ending 31st August was 4·6 inches below the average, while in November and December together the fall was as much as 4·6 inches above the average. The rain-fall for the year was 24·2 inches, or 1·2 inches below the average of 61 years.

Prices.—The years 1874–5 were periods of reaction from the high prices and wages in the prosperous years of 1871–3, and the year 1876 witnessed no return to general prosperity; reduced wages and commercial failures contributed to the depression of trade. The coal and iron trades especially suffered. Textile trades were unsettled, and there were fluctuations and distress in other branches of commerce.

In 1875 the harvest was very unsatisfactory, but foreign supplies of wheat were abundant, and no less than 51,876,517 cwts. were imported into the United Kingdom for home consumption; this is the largest importation on record. The harvest of 1876 was also unsatisfactory, and the quantity of wheat imported for home consumption was 44,454,657 cwts.* or 10,258,846 quarters† of the declared value of 23,178,011*l.*, about 10*s.* 5*d.* per cwt. or 45*s.* 2*d.* per quarter. The winter of 1875–6 afforded a most unfavourable

* See Statistical Abstract for the United Kingdom, 1862–76, pp. 27 and 33.

† The average weights per quarter of corn, as adopted in the office of the Inspector-General of Imports and Exports, are as follow :—For wheat, $485\frac{1}{8}$ lbs., or $4\frac{1}{8}$ (4·3333) cwts.; for barley, 400 lbs., or $3\frac{1}{4}$ cwts.; for oats, 308 lbs., or $2\frac{3}{4}$ cwts. Corn has been entered by weight instead of measure since September 1864. The duty was taken off wheat on 1st June 1869.

seed time, and the spring of 1876 was ungenial. The acreage under wheat in the United Kingdom was 3,124,342, or 11 per cent. less than in 1875.

The average price of wheat, 46s. 2d., was low, for although it was exactly one shilling per imperial quarter higher than in 1875, still it was 19 per cent. lower than the average price in the four years 1871-4. In the 17th century the average price of 64 gallons of wheat, imperial measure, reduced in the ratio which the Windsor prices bore to the average prices given by the Receiver of Corn Returns was 40s. 7d., in the 18th century it was 40s. 6d.*

The average price of beef by the carcase at the Metropolitan meat market was 6½d., nearly the same as the previous year, when it was 6¼d.

The price of mutton was 7¾d., exactly the same as in 1875; so the increased importation of meat, although it might have prevented further increase, has done nothing as yet towards the reduction of the high price of butchers' meat.

The number of animals, exclusive of cows, imported in 1876 was 1,298,108, of the value of 6,163,284*l*.

TABLE 5.—NUMBERS and VALUE of ANIMALS IMPORTED in 1875 and 1876.

ANIMALS.	NUMBERS.		VALUE.	
	1875.	1876.	1875.	1876.
			£	£
Oxen and Bulls -	173,705	168,958	3,737,588	3,554,480

Meat, „ „ - - -	42,340	55,354	79,841	119,403	144,954	92,556
Total - - -	344,419	284,266	340,395	381,124	360,535	505,907
Meat, Preserved otherwise than } by salting - - - - }	254,833	350,729	260,749	265,223	171,373	283,066
Total Meat - - -	599,252	634,995	601,144	646,347	531,908	788,973

Thus the aggregate value of meat and of animals imported in the year 1876 was 8,275,729*l*.

* See Paper by Dr. Farr, F.R.S., on "The Influence of Scarcities and of the High Prices of Wheat on the Mortality of the People of England." Journal of the Statistical Society. Vol. ix., pp. 168-9.

† Exclusive of Pork, of which 378,607 cwts. were imported in 1876.

Pauperism.—The effects of the changes in the administration of the out-door relief of the poor continue to be visible in the returns for the year 1876. The average number of paupers returned on the last day of each week in each of the years 1875 and 1876 was—in-door 135,041 and 137,930—out-door 579,169 and 531,341, showing a slight increase in the number of in-door paupers relieved (2·1 per cent.), but a considerable decrease (8·3 per cent.) in the number of out-door paupers relieved.

TABLE 7.—RESULTS of SIX CENSUSES of PAUPERS taken on the 31st December of each Year, 1871–6.*

	NUMBERS.			PROPORTION TO 10,000 OF POPULATION.		
	In-door.	Out-door.	Total.	In-door.	Out-door.	Total.
1871 - -	150,093	780,809	930,902	66	343	409
1872 - -	147,657	690,979	838,636	64	300	364
1873 - -	144,201	637,269	781,470	62	273	335
1874 - -	146,947	603,468	750,415	62	255	317
1875 - -	144,313	557,604	701,917	60	233	293
1876 - -	149,853	524,280	674,133	62	216	278

* Exclusive of lunatics in asylums, and vagrants.

The decrease in the numbers of paupers enumerated on 31st December in each year was from 1874 to 1875, 48,498, or 6·5 per cent.; from 1875 to 1876 it was 27,784, or 4·0 per cent.

In 1871 there were 409 paupers in receipt of relief to every 10,000 of population, whereas in 1875 the proportional number was 293, and in 1876 only 278. Nearly the whole of this reduction occurred under the head of out-door relief.

MARRIAGES.

201,874 marriages were solemnized in England and Wales in 1876, a number but little in excess of that in the previous year. The marriage-rate (persons married to 1000 of population) was 16·7, or ·1 less than in 1875, and ·1 less than the mean of the 10 years 1866–75.

During the year 1876 wages in many trades were reduced; there was no revival of industry, and commercial distress continued to prevail. In several respects 1876 was also a bad year for the farmer, fruit crops failed, and live stock suffered severely from drought.

Under such conditions as these it was not to be expected that the people would take a cheerful view of their prospects, so the marriage-rate was depressed.

Compared with the mean rate observed in the 10 years 1866–75, the depression was most conspicuous in the counties of Hertford, Buckingham, Huntingdon, Bedford, Cambridge, Cornwall, Gloucester, Hereford, Stafford, Worcester, Durham, Northumberland, Westmorland, Monmouth, and in South Wales. The counties in which an excess in the rate was most marked were Northampton, Warwick, Rutland, Nottingham, Derby, East Riding with York, Cumberland, and in North Wales.

Forms of Marriage.—201,874 marriages were celebrated during the year 1876; 148,910, or 73·8 per cent., according to the rites of the Establishment, and 51,964, or 26·2 per cent., otherwise.

Of the marriages according to the rites of the Established Church 33, or ·02 per cent., were by special license, 17,620, or 11·89 per cent., by license, 126,849, or 85·59 per cent., after banns, and 3,710, or 2·50 per

cent., by Superintendent Registrar's certificate. In 698 instances,* or .47 per cent., the clergy omitted to state under which of the foregoing heads the marriages should be recorded: although this is a comparatively large number, still it is 149 less than the previous year, and the following results show that the number of such imperfect returns is gradually decreasing.

To every 1000 marriages according to the rites of the Established Church the number of cases in which the words "by license," "by banns," or "by Superintendent Registrar's certificate" were omitted:—

Years.		Mean Annual Number.	
In the five years	1841-45	-	159
"	" 1846-50	-	122
"	" 1851-55	-	41
"	" 1856-60	-	29
"	" 1861-65	-	25
"	" 1866-70	-	20
"	" 1871-75	-	7
Year 1876	-	-	5

The returns continue to be most imperfect in the Eastern counties, 13.8 per 1000, and in the South-western counties 11.0. The proportional numbers of imperfect returns were also high in the South Midland counties 9.7, in the South-eastern counties 8.1, and in the Welsh Division 7.6. The proportional numbers were lowest in the North-western counties .7, and in London 1.1.

The number of marriages by license increased from 15.42 per cent. in 1841-5 to 16.01 per cent. in 1856-60, and then gradually fell off to 11.89 per cent. in 1876. The number of marriages after banns declined from 83.28 per cent. in 1841-5 to 80.88 per cent. in 1856-60, after which period the number gradually increased, until in 1876 the proportion per cent. reached 85.59.

In the English Church for some reason or other opinion has, since 1861, set in favor of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation.

The subjoined table shows the results at different periods, after correction for imperfect returns by distributing proportionally the number of cases not stated under the different heads.

TABLE 8.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-76.

PERIODS OF FIVE YEARS.	MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.				
	Total.	Special License.	License.	Banns.	Superinten- dent Registrar's Certificate.
1841-45 - -	100	.01	15.42	83.28	1.29
1846-50 - -	100	.01	15.47	82.39	2.13
1851-55 - -	100	.01	15.58	81.53	2.88
1856-60 - -	100	.01	16.01	80.88	3.10
1861-65 - -	100	.01	14.93	81.94	3.12
1866-70 - -	100	.01	13.56	83.43	3.00
1871-75 - -	100	.01	11.58	85.71	2.70
Year 1876 - -	100	.02	11.89	85.59	2.50

* These 698 cases have been proportionally distributed over the foregoing headings.

Of the 52,964 marriages not according to the rites of the Establishment, 8,577, or 16·19 per cent., were solemnized in the registered places of Roman Catholics, 22,164, or 41·85 per cent., in the registered places of other Christian denominations, and 21,709, or 40·99 per cent., in the offices of Superintendent Registrars without any religious rite. Fifty-five, or ·10 per cent., were celebrated according to Quaker rites, and 459, or ·87 per cent., were marriages of Jews.

First Marriages ; Re-marriages.—Of the 201,874 men who married in 1876, 173,438 were bachelors, and 28,436 were widowers ; 164,271 of the bachelors married spinsters ; the remaining 9167 bachelors married widows. Of the 28,436 widowers who re-married 16,726 chose spinsters, and 11,710 chose widows.

Of the 201,874 women who married, 180,997 were spinsters, and 20,877 were widows ; 164,271 of the spinsters were wedded to bachelors, and the remaining 16,726 to widowers. Of the widows, 11,710 were re-married to widowers, and 9167 to bachelors. The *number of persons* who re-married in 1876 was 49,313.

The number of marriages of divorced persons in 1876 was 90, or 21 more than in 1875. Of 57 divorced men who re-married, 49 married spinsters, and 8 married widows. Of 33 divorced women who re-married, 20 married bachelors, and 13 married widowers.

Ages at Marriage.—For the solution of many important social problems, especially in relation to population, it is necessary that the precise age at marriage should be returned, and it is much to be regretted that of the 201,874 couples who married in 1876 the precise ages of both parties were stated in 155,777 instances only ; the age column of the marriage register in 46,097 cases being filled in by the Officiating Minister or by the Registrar of Marriages with the words “of full age,” “minor,” or “under age.”

It is true that the returns are less imperfect now than they were in some previous years, but the improvement is slow, and the ages of both parties were not returned in 1876 in 23 per cent. of the total marriages ; a reduction of only 3 per cent. on the proportion in 1874.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table :—

TABLE 9.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1857–76.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1857	40·9	1867	33·5
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8

The returns, as to age, are more complete in the mining and manufacturing counties than in and around London. In Yorkshire the ages of both parties were omitted to be stated in only 8·0 per cent. of the total marriages, in the Northern counties the proportional number was 11·2, in Monmouthshire and Wales 14·5, and in the North-western counties 15·7, while in London—although there is some improvement since the year 1874—the returns are still very imperfect, the proportional number of cases in which the ages of both parties were not stated being 43·9. In the surrounding counties, viz., the South-eastern and South Midland, the respective proportions were also high—27·7 and 28·3 per cent.

The annexed table shows the proportion of imperfect returns in each of the years 1874 and 1876 in each registration division of England and Wales :—

TABLE 10.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1874 and 1876.

GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.

North Midland Counties -	24·7	21·9			

The number of cases in which both parties are unwilling, or unable to state their ages when married, must be comparatively small, and if the ages can be returned in Yorkshire in 92 per cent. of the total marriages, no doubt the same desirable result can be obtained in London, where, at present, the proportional number of cases in which the ages of both parties were returned was only 56 per cent.

A certificate of marriage expressing the precise age of both parties identifies them to a certain extent, and is much more valuable than a certificate merely distinguishing them as minors or of full age.

At the time of registering the marriage it might be stated that it is important to the parties themselves to return their precise ages, not only for tracing pedigree, but for other purposes of personal identification.

The services rendered by the clergy in connection with registration under the Marriage Acts have done much towards perfecting the national records, but their value might be still further enhanced if they would cause the precise ages to be returned.

The mean age at marriage as determined from the 311,554 men and women whose ages were stated in the year 1876, including the re-married, was 28·0 years for men, and 25·8 years for women. For 135,685 bachelors it was 25·7 years, and for 140,680 spinsters 24·4 years. The mean age at marriage of 20,092 widowers was 43·1 years, and of 15,097 widows 39·5 years. These results are almost exactly the same as those for the year 1867.

TABLE 11.—ENGLAND.—MEAN AGES at MARRIAGE of 311,554 Persons whose AGES were specified in the MARRIAGE REGISTERS of the Year 1876, distinguishing their previous Civil Condition.

Number of Couples.	Previous Civil Condition of Persons married.		Mean Ages at Marriage.		The mean Age of the Husbands exceeded that of the Wives by *
	Husbands.	Wives.	Husbands.	Wives.	
155,777	Men - -	Women - - -	28·0	25·8	2·2
140,680	" - -	Spinsters - - -	26·6	24·4	2·2
15,097	" - -	Widows - - -	41·1	39·5	1·6
135,685	Bachelors -	Women - - -	25·7	24·2	1·5
128,994	" - -	Spinsters - - -	25·4	23·7	1·7
6,691	" - -	Widows - - -	32·5	34·4	-1·9
20,092	Widowers -	Women - - -	43·1	36·8	6·3
11,686	" - -	Spinsters - - -	39·6	31·9	7·7
8,406	" - -	Widows - - -	47·9	43·6	4·3

* The minus sign denotes that the mean age of the wives exceeded that of the husbands.

The above table shows that in 128,994 instances in which bachelors married spinsters, the mean age of the husbands at marriage was 25·4 years, and that of the wives was 23·7 years, the mean age of the men exceeding that of the women by 1 year and $\frac{7}{10}$ ths.

TABLE 12.—ENGLAND.—MEAN AGES at MARRIAGE of 311,554 Persons whose AGES were specified in the MARRIAGE REGISTERS of the Year 1876, distinguishing their previous Civil Condition; and, in the case of the Women, those who were under 45 from those above that Age (assuming 45 as the limit of the Child-bearing Ages).

Number of Couples.	Previous Civil Condition of Persons married.		Mean Ages at Marriage.		The mean Age of the Husbands exceeded that of the Wives by *
	Husbands.	Wives.	Husbands.	Wives.	
150,125	Men - -	Women under 45 -	27·0	24·8	2·2

4,781	" - -	Widows under 45 -	42·0	36·4	5·6
3,625	" - -	" over 45 -	55·7	53·1	2·6

* The minus sign denotes that the mean age of the wives exceeded that of the husbands.

The above table shows that in 128,651 instances in which bachelors married spinsters under 45 years of age, the mean age of the husbands

at marriage was 25·3 years, and that of the wives was 23·6 years, the mean age of the men exceeding that of the women by 1 year and $\frac{7}{10}$ ths. In 343 instances in which bachelors *married spinsters over 45 years of age*, the mean age of the husbands at marriage was 50·0 years and that of the wives was 50·5 years, the mean age of the women exceeding that of the men by half a year.

In my last Report I pointed out that the increasing tendency to early marriage was accurately shown by comparing the number of men and women who married under age with the *numbers living*, but a comparison of the number of minors married to the *total marriages* indicates, though less accurately, that these marriages of minors are increasing. The counties which generally show the highest proportions of marriages of minors were enumerated in my last report.

16,655 males and 44,401 females married in 1876 under 21 years of age; therefore to every 100 males married 8·25 were under age, and to every 100 females married 21·99 were under age.

The annexed results show the proportions in periods of 5 years since 1841. The rate of increase is greatest among men.

TABLE 13.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841–76.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841–45	4·38	13·35
1846–50	4·48	14·23

1856–60	5·94	18·65
1861–65	6·55	19·87
1866–70	7·08	20·84
1871–75	8·15	22·22
Year 1876	8·25	21·99

Signature in Marriage Registers.—The men and women now married were educated some years since, and the benefit of increased elementary education in former years is reflected year by year in the decreasing number of men and women who sign the marriage register with marks. The improvement, however, is slow, for 77,536, or 19·2 per cent. of the 403,748 persons who married in 1876, still signed the marriage register with marks.

The men are better educated than the women, for while 32,998 of the men signed with marks, 44,538 of the women could not write their names. The proportion to every 100 marriages being 16·3 for men, and 22·1 for women, against 17·2 and 23·2 respectively in the previous year.

These proportions are rather more than half what they were 25 years ago, when 30·8 per cent. of the men and 45·3 per cent. of the women were unable to write. A steadily increasing number of children have passed through school during the last quarter of a century, and some of the good resulting therefrom is recording itself in the marriage registers.

The gradual improvement that has taken place is shown in the subjoined table.

TABLE 14.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS, 1841–76.

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.	
	Men.	Women.	Men.	Women.
1841–45	32·6	48·9	1·2	2·7
1846–50	31·4	46·2	1·2	2·7
1851–55	30·2	43·5	3·1	5·4
1856–60	27·1	38·1	3·5	5·2
1861–65	23·6	32·9	3·1	4·6
1866–70	20·5	28·3	2·0	3·1
1871–75	18·5	25·2	—	—
Decrease in the 35 years 1841–75 -			15·5	25·6
Year 1876	16·3	22·1	—	—

In 17,393 instances *both* the husband and the wife signed with marks, and in 42,750 cases either the husband or the wife was unable to write.

The subjoined table shows the state of elementary education, as indicated by the proportional number of men and women who signed the marriage register with marks, in the different divisions of the United Kingdom for the most recent years for which the abstracts have been published.

TABLE 15.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS in different DIVISIONS of the UNITED KINGDOM.

—	Years.	To every 100 Marriages the proportion who signed the Marriage Register with Marks.	
		Men.	Women.
ENGLAND AND WALES - - - {	1875	17·2	23·2
	1876	16·3	22·1

	1876	31·9	37·3

In the year 1876 London shows the greatest proficiency among men, for there the proportional number who signed with a mark was only 8·1 per cent.; then follow the counties of Westmorland 8·7, Middlesex (*extra-metropol.*) 10·5, Surrey (*extra-metropol.*) 10·7, Northumberland 11·0, East Riding with York 11·5, Hants 11·9, Devon 12·6, and Cumberland 12·7. The proportional numbers in the following counties indicate that elementary education among men has been much neglected, Stafford 28·9, Monmouth 28·0, Bedford 25·9, Suffolk 25·5, North Wales 24·6, Herts 24·5, Norfolk 24·3, Cambridge 23·1, and Hereford 23·1.

In the agricultural counties, as a rule, the women are better educated than the men, but the converse of this is the case in the mining and manufacturing counties, where the proportional number of women who signed with a mark was excessively high; thus in the West Riding of York the proportion per cent. was 29·5; in Durham it was 29·8, Bedford 30·2, North Wales 31·3, Monmouth 31·9, Lancaster 32·7, Stafford 35·7, and in South Wales 37·2.

The number of elementary day schools visited by the inspectors for the purpose of annual grants, during the year ending 31st August 1876, was 14,273, affording accommodation for 3,426,318 scholars.* The names of 2,943,774 scholars were entered on the school registers, a number approximating to the three millions and a quarter, who it is assumed at least ought to be receiving daily instruction at public elementary schools.† 2,412,211 scholars were present on the day of inspection, but only 58 per cent. of the accommodation provided was utilized, for the daily average attendance was but 1,984,573.

The provision for accommodation of scholars in 1869 was only 8·3 per cent. of the whole population; in 1876 the proportion had increased to 14·1 per cent.; additional accommodation having been provided in the seven years 1869–76 for 1,660,374 children.

602 schools were inspected, in addition to the above, but they did not fulfil the conditions on which annual grants are made; the number of scholars present on the day of inspection in these schools was 36,088.

In 1474 night schools the average nightly attendance was 49,858, bringing up the average attendance in aided schools (day and night) to 2,034,431.

Buildings registered for Marriages.—The number of these buildings registered in 1876 was 201, bringing up the total number on the register at the end of the year to 7796.

Certified Places of Worship.—The number of buildings certified for religious worship during the year 1876 not being churches or chapels of the Established Church was 543. The number on the register on 31st December 1876 was 19,064, being less than at the end of the previous year, in consequence of the register having been revised and the registration of a large number of disused buildings cancelled. The following

* See Report of the Committee of Council on Education, 1876–7, pp. vii–xi.

† It was estimated by Dr. Farr—from a Return by the Inland Revenue Department, showing the number of houses of the assessed annual value of 20*l.* and upwards in the year ending 5th April 1864–65—that the proportional number of children in England and Wales belonging to the middle and upper classes was 15 per cent., and it is remarkable how closely this proportion agrees with that for London, deduced from the facts published by the London School Board; thus, the number of children aged 3 and under 13 years, furnished by the Registrar General from the Census Returns of 1871, was 681,101, and the number of children returned by the Board as “not requiring elementary schools” as they were attending schools where the weekly fee exceeded nine-pence, was 97,307 (exclusive of 9,101 in institutions), the proportion being 14·3 per cent.; so about six sevenths, or six out of seven children, belonged to the class who should attend public elementary schools.

is a list of the various titles of religious denominations whose places of worship have been certified to the Registrar General. The names printed in italics have been added since the publication of the list in my last Report.

BIRTHS.

The Registration Act of 1874 has now been in force two years, and the results of the registration of births for the year 1876 apparently indicate that the administration of the new Act has operated in a satisfactory manner. 887,968 births were registered during the twelve months, against 850,607 in the previous year, showing an increase of 37,361. Owing to delay in registration, it is probable that a certain proportion of the excess belongs to the previous year, but it is believed that a large proportion of the births that formerly escaped registration altogether is now recorded in the national registers. The birth-rate was the highest on record, being 36.6 per 1000 of population, or 1.2 per 1000 above the average rate for the 10 years 1866-75.

The results in the subjoined table show that the sudden and remarkable migration of married women of the child-bearing ages from the agricultural districts to the counties containing the great centres of mining and manufacturing industries of the country, which began in 1873, still continued in 1876.

TABLE 16.—REGISTRATION COUNTIES showing (1864-73 and 1876) respectively HIGH and LOW BIRTH RATES.

Children born out of wedlock.—The number of illegitimate births registered in England in the second year of compulsory registration was 41,594, and although this is 781 more than the number in 1875, it is considerably less than that recorded in previous years, for illegitimacy has decreased in England; thus the proportion per cent. of illegitimate to total births has declined from 6.4 in the 10 years 1856-65, to 5.5 in the 10 years 1866-75, to 4.8 in the year 1875, and to 4.7 in the year 1876.

The rate of illegitimacy was lowest in 1876 in the extra-metropolitan part of Middlesex, where it was only 3.3 per cent. In London it was 3.6; then follow the counties of Essex 3.7, Monmouth 3.7, and Warwick 3.8. In the mining county of Durham the rate was low, 3.8 per cent., and the proportional number of spinsters aged 20-40 to total women living in 1871 was, as will be seen by reference to Table 17, also remarkably low. In the extra-metropolitan part of Surrey the rate of illegitimacy was 4.0, in the extra-metropolitan part of Kent 4.2, Northampton 4.3, Hants 4.4. In the manufacturing county of Stafford the rate was also comparatively low, 4.4, and so was the proportional number of spinsters.

The highest rates were in the counties, &c. of Salop 8·5, Norfolk 8·5, Cumberland 7·8, Hereford 7·7, Westmorland 7·6, North Wales 6·9, Bedford 6·3, and Cornwall 6·1. In each of these counties the proportional number of spinsters aged 20-40 to total women living in 1871 was also very high. The results in the manufacturing county of Nottingham were exceptional, for there the rate of illegitimacy was 6·1, while the proportional number of spinsters was comparatively low.

TABLE 17.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES, &c. of ENGLAND and WALES in 1856-65, 1866-75, and in 1876.

[Counties arranged according to rates prevailing in 1876.]

Shropshire - - - -	9·6	9·1	8·5	6·6	40·9

The improvement that has taken place in the various counties, &c. is shown in Table 17; thus the decrease per cent. in the rate in 1876 compared with the mean rate in the 10 preceding years was as much as 34 in the North Riding of York, 23 in Leicester, 23 in Cumberland, 21 in Essex, South Wales, and Berks, 20 in Northampton, Stafford, and Wilts, and 19 in Hunts, Warwick, Durham, Herts, and Notts. In some of the counties very little improvement is observed; thus in Hereford the decrease was only about one per cent., in Cornwall and Devon 5, in Salop 7, Hants 8, Bucks, Sussex, and North Wales 9 per cent.

The relation between the illegitimate births and the proportional number of spinsters in different counties is more strikingly exhibited if the counties in Table 17 are arranged in groups in the order of the rate of illegitimacy. .

DEATHS.

In the year 1875 the mortality had been high (22·8 per 1000 of population), the winter unusually severe, and cold winds, with extremes of temperature, had proved very fatal to infants and to elderly people; the rain-fall had been excessive, at Greenwich it measured 28·2 inches, or 4·1 inches above the average of 27 years.

In the year now under review (1876) the meteorological conditions were more favourable to health; it is true that there were unusual and frequent falls of snow in the first four months of the year, but the weather was milder; the variations in the temperature though frequent, especially in the first three months of the year, were not so sudden; the rain-fall was about the average. The deaths from small-pox and measles were more numerous than in the preceding year, still it cannot be said that any epidemic was *unusually* prevalent; 510,315 deaths were registered during the year out of an estimated population of 24,244,010, so the mortality was at the rate of 21·0 per 1000. This is the lowest death-rate during the last 20 years, and, with three exceptions, the lowest on record. Compared with the mean annual rates of mortality in the five preceding years there was a reduction in the death-rate in 1876 in the town districts of 5 per cent., while the reduction in the rural registration districts was only 3·6 per cent.

Sex and Age.—Of the 510,315 deaths registered in 1876, 265,076 were males, and 245,239 were females. The mortality of males was at the rate of 22·5 per 1000 of the male population, the mortality of females at the rate of 19·7 per 1000 females living, the average rates in the 25 years 1848–72 being 23·5 for males and 21·4 for females. The deaths of males in the year were as 108 to 100 deaths of females; the average being 104 to 100.

The last enumeration of the people in 1871 shows that there was an excess in the number of females living over that of males; but the deaths in 1876 out of an *equal number of both sexes living* were in the proportion of 114 deaths of males to 100 deaths of females.

A comparison of the death-rates at different ages in 1876 with the average annual rates in the 25 years 1848–72 shows that the reduction at all ages was mainly due to a much lower rate among children, and among persons at ages under 35 and over 75 years.

Compared with the previous year the rates were less at every age. This was probably due to atmospheric causes.

Seasons.—Three cold periods of unequal length prevailed during the first three months of the year extending over 41 days; the intervening periods were warm, but the mean temperature of the quarter (39°·8) was only one degree above the average of the preceding 105 years. 142,218 deaths were registered during these three months; the temperature was variable, but the mortality was not high for the winter quarter,

being at the annual rate of 23·5 per 1000 of the estimated population, or 1·1 below the average for the corresponding quarter of the 10 years 1866–75, and no less than 4·0 per 1000 below the rate of the corresponding quarter of the previous year. The rain-fall of the quarter, measured at the Royal Observatory, Greenwich, was exactly the same as the average of 61 years, viz. 4·9 inches.

Notwithstanding the cold weather which prevailed in the second quarter of the year, the mortality was 0·5 per 1000 below the average 1866–75, the 126,239 deaths registered being equal to an annual rate of 20·9 per 1000. From 10th to 19th April the weather was more or less severe with heavy snow storms. In London there was a succession of snow storms. On 13th and 14th April unusually severe weather was experienced all over the country, and a great quantity of snow fell; in some places it was 16 or 24 inches deep; all traffic between London and the North was greatly delayed. From 30th April to 18th June the weather was generally cold. During the greater part of May there was a cold east, and north-east wind, and no rain fell for 20 days. For the 50 days ending 18th June the daily deficiency of mean temperature was nearly $3\frac{1}{2}^{\circ}$, but from the 19th June to the end of the quarter the average daily mean temperature was in excess; the mean of the quarter was $51^{\circ}\cdot7$, or $1^{\circ}\cdot3$ below the average of the preceding 105 years. The total rain-fall for the quarter at Greenwich was 3·5 inches, being 2·3 inches below the average of 61 years.

During the first 53 days of the third quarter of the year the weather was fine and warm; at times unusually high temperatures were experienced, but on 23rd August there was a complete change, the average daily deficiency of temperature until 17th September being $3\frac{1}{2}^{\circ}$, and rain fell continuously; from 18th September to the end of the quarter the weather was warm and wet. Although nearly 15,000 deaths were ascribed to summer diarrhoea, still the season was not unhealthy, for the 119,977 deaths registered were equal to an annual rate of mortality (19·6), 1·4 per 1000 below the average 1866–75. The mean temperature of the air for the quarter was $61^{\circ}\cdot8$, or $2^{\circ}\cdot1$ above the average of the preceding 105 years. At Greenwich the fall of rain was comparatively small, measuring only 5·3 inches, or 2·2 inches below the average of 61 years.

The mean temperature of the air in the last quarter of the year was remarkably high. Up to the 21st October the weather was warm and wet; the excess in the mean daily temperature was $5\frac{1}{4}^{\circ}$. From 21st October to 12th November the weather was generally cold, and the defect in the mean daily temperature was $3\frac{1}{4}^{\circ}$. From 13th November to the end of the quarter, with the exception of six days in December, the weather was more or less warm and wet. In December there were heavy and continuous falls of rain which produced great floods; and some severe gales were experienced. During this month 5·8 inches of rain fell at Greenwich, being 3·8 inches above its average; the total fall for the quarter was 10·5 inches, or 3·4 inches above its average. The extraordinary rain-fall and high temperature which prevailed during the quarter do not appear to have acted unfavourably on the public health, for the death-rate was 2·2 per 1000 below the average for the corresponding quarter in the ten years 1866–75, the 121,881 deaths registered being equal to an annual rate of 19·9 per 1000.

Locality.—In every county of England and Wales the rate of mortality in 1876 at all ages was lower than the average for the 10 years 1866–75, except in Hampshire, Cornwall, Herefordshire, Rutlandshire, Nottinghamshire, and Derbyshire, and in North Wales; and lower than the rate of the preceding year except in Hampshire and Rutlandshire.

The death-rate of England was 21·0 per 1000, and, taking this as a standard, there were 12 counties, &c. which had a rate higher than this. As usual Lancashire heads the list, then follow the West Riding of York,

Nottinghamshire, London, Staffordshire, Leicestershire, Derbyshire, North Wales, Cheshire, Northumberland, Cumberland, and Warwickshire. The mortality in the remaining counties, &c. was below that of England, and ranged from 16·2 in the extra-metropolitan part of Surrey to 20·9 in Durham.

TABLE 20.—COUNTIES with a MORTALITY in 1876 above that of ENGLAND AND WALES.

COUNTIES, &c.	Death-rate per 1000 of Population in 1876.

DEATH-RATES of CHILDREN.

Children under one year of Age.—In my last Report I drew attention to the high proportional number of deaths of children under one year of age to 1000 births in the eighteen large towns. In the year now under review (1876) the rates were lower than the preceding year in fifteen of these towns, but in Portsmouth, Wolverhampton, and Salford the rates were higher.

TABLE 23.—PROPORTIONAL NUMBER of DEATHS of CHILDREN under ONE YEAR of AGE from ALL CAUSES to 1000 BIRTHS registered in ENGLAND AND WALES, and in EIGHTEEN LARGE TOWNS, 1870-76.

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In England and Wales in 1876 the proportional number of deaths of infants to every 1000 births was 146. In Portsmouth it was 142, and this was the only large town where the rate was lower than that of England. In the remaining towns the proportions ranged from 152 in Sunderland, 153 in Bristol, and 157 in London, to 180 in Manchester and in Leeds, 189 in Salford, 200 in Leicester, and 208 in Liverpool.

Although the rates of infant mortality are still excessively high, it is gratifying to observe an improvement in the year 1876, compared with the average in the five years 1870-74 in these and several other towns; thus, the proportion fell in Liverpool from 239 to 208, in Leicester from 226 to 200, in Bradford from 202 to 174, in Newcastle from 193 to 167, in Leeds from 205 to 180, in Sunderland from 176 to 152, and in Manchester from 202 to 180.

Children under five years of Age.—The death-rate of children under five years of age in England in 1876 was 63 per 1000 of population, or 3·9 per 1000 less than the preceding year. In the seventeen large towns the rate in 1876 ranged from 69 per 1000 in Norwich and Sunderland to 98 in Liverpool and 113 in Salford.

NOTE.—The deaths of children under five years of age in sixteen of the above towns were supplied by the Medical Officers of Health.

The death-rate under five years of age increased in Portsmouth from 58 in the three years 1873-75 to 74 in 1876; in the latter year a severe epidemic of scarlet fever prevailed in this town, and the mortality from measles had also increased. In Wolverhampton the death-rate rose from 74 per 1000 in the three years 1873-75, to 78 in 1876, owing chiefly to an increase in the number of deaths registered from measles, diarrhœa, and lung diseases. In Salford and Oldham the mortality of children under five years of age also increased, but in the remaining towns the death-rate in 1876 was lower than the mean of the three preceding years.

In Newcastle-upon-Tyne the decrease in the mortality from 92 per 1000 in the three years 1873-75, to 72 in 1876, was chiefly attributable to a reduction in the number of deaths from whooping-cough, diarrhœa, convulsions, and atrophy.

In Nottingham the decrease in the mortality of children under five years of age, from 93 per 1000 in the three years 1873-75 to 86 in 1876, was mainly owing to a reduction in the deaths from measles, lung diseases, and atrophy.

In Birmingham the decrease in the mortality from 91 per 1000 in the three years 1873-75 to 74 per 1000 in 1876 was chiefly attributable to a reduction in the number of deaths from whooping-cough, diarrhœa, measles, scarlet fever, small-pox, and atrophy.

Deaths in Public Institutions in England.—The number of hospitals increased from 582 in 1875, to 611 in 1876, showing an increase of 29 during the year, nearly all of which were cottage hospitals. The abstracts relating to Public Institutions* show the number of deaths registered in

* See pp. 99-119.

each registration division and county, and in each district and sub-district, in the year 1876. The total deaths registered in England and Wales amounted to 510,315, out of which number 46,235, or 9 per cent., occurred in 1410 of the public institutions of England and Wales. Of these 46,235 deaths, 29,268, or 63 per cent. occurred in 716 workhouses, workhouse infirmaries, or workhouse schools, 12,354, or 27 per cent. in 611 hospitals or infirmaries, and 4613, or 10 per cent. in 83 lunatic asylums, so of the total number of persons who died in England in 1876, one out of 11 took place in one or other of 1410 public institutions, one out of 17 occurred in a workhouse, one out of 41 in an hospital, and one out of 111 in a lunatic asylum. Only those deaths registered in workhouses, hospitals, infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions.

TABLE 25.—NUMBERS and PROPORTIONS of DEATHS in the DIFFERENT CLASSES of PUBLIC INSTITUTIONS in ENGLAND AND WALES in each of the Years 1869 and 1876.

PUBLIC INSTITUTIONS.	1869.				1876.

Lunatic Asylums - -	72	3,569	7·2	138·6	83	4,613	9·0	110·6

The abstracts of Deaths registered in these public institutions situate in the several districts and sub-districts (published for the first time in 1869) afford the means of correcting the mortality, which in some districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

Deaths in Public Institutions in London.—A reprint of the table published in my annual summary for 1876, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.† In the 52 weeks of that year 14,073 deaths were registered in 165 public institutions. Of every 1000 of these deaths, 581 occurred in fifty-four workhouses, 5 occurred in eleven prisons, 6 in two military asylums, 316 in thirty-eight general hospitals, 34 in thirty-eight hospitals for special diseases, 7, viz., 2 women and 5 children, in five lying-in hospitals, 13 in four military and naval hospitals, 7 in three hospitals for foreigners, and 31 in ten lunatic asylums.

Of every 1000 deaths registered in London ten years ago (1866) 162·9 took place in one or other of 119 public institutions. Of this proportional number 88·5 occurred in forty-six workhouses, 1·2 in twelve prisons, 47·6 in sixteen general hospitals, 4·8 in nineteen lunatic asylums.

* See Introductory Note, p. 99.

† See Preliminary Table, No. 39.

In 1876, of every 1000 deaths registered in London, 181·8 took place in one or other of 165 institutions, viz., 105·6 in fifty-four workhouses, ·9 in eleven prisons, 57·4 in thirty-eight general hospitals, 5·7 in ten lunatic asylums; so of the total number of persons who died in London in the year 1876, one out of 6 took place in one or other of 165 public institutions, one out of 9 occurred in a workhouse, one out of 1122 in a prison, one out of 17 in an hospital, and one out of 176 in a lunatic asylum.

PROGRESS OF REGISTRATION.

Names on the Registers and Searches.—During the year 1876 the names of 1,802,031 persons, whose marriages, births, and deaths were registered, were added to the printed alphabetical indexes of this office, bringing up the number of names indexed in 39½ years to 55,880,349.

The results in the subjoined table are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

TABLE 27.—TOTAL and AVERAGE ANNUAL NUMBER of SEARCHES, 1845–76.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845–9 -	4,758	952	In the year 1845 -	8·0
" 1850–4 -	8,344	1,669	" 1850 -	7·9
" 1855–9 -	17,425	3,485	" 1855 -	11·1
" 1860–4 -	35,127	7,025	" 1860 -	19·1
" 1865–9 -	56,544	11,309	" 1865 -	24·2
" 1870–4 -	91,458	18,292	" 1870 -	33·7
In the year 1875 -	25,407	25,407	" 1875 -	47·0
" 1876 -	26,762	26,762	" 1876 -	47·9

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, and for boys about to be employed as messengers, &c. for post office purposes.

Of the 26,762 searches in 1876, certificates were issued in 20,988 instances, namely, 9492 registration certificates of births, 8479 of deaths, and 3017 of marriages.

The total number of searches in 1876 (including those relating to the non-parochial and other records) was 27,590, and the number of certificates issued was 21,637.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1876 was 4,109*l.* 15*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi-ii.

UNITED KINGDOM.

The population of the United Kingdom is now estimated to have reached 33,000,000 (about 4,000,000 less than the enumerated population of France), 73 per cent. of which belonged to England and Wales, 11 per cent. to Scotland, and 16 per cent. to Ireland.

The number of emigrants from Ireland in 1876 was 38,315, or 14,082 less than in 1875. Of this number 728 were natives of other countries. It is noteworthy that a point has been reached where emigration has ceased to reduce the population of Ireland, for the number of inhabitants in 1876, estimated by the Registrar-General of Ireland, was 5,321,618, against 5,309,494 in the previous year, showing a slight estimated increase of population for the first time since the year 1845.

The estimated population of Scotland at the middle of 1876 was 3,527,811.

The number of persons whose marriages were registered in the United Kingdom in 1876 was 509,650. The number of births was 1,155,186, and the number of deaths was 676,761, so the natural increase of population by the excess of births over deaths was 478,425. After deducting the net loss to the population by excess of emigrants of British origin over immigrants of British origin, this number is reduced to 440,360.

The marriage-rate of the United Kingdom in the year 1876 was 15·4 per 1000, but this requires correction for defective registration in Ireland, for owing apparently to the neglect of the Roman Catholic clergy the number of marriages unregistered under the 26 & 27 Vict. c. 90. is still numerous.*

Owing to the difference in the marriage laws in Scotland as to registration, the marriage-rate in England was considerably higher than that of Scotland; the respective rates being 16·7 and 15·1 per 1000.

The English birth-rate was 36·6 per 1000 of population, the Scottish 35·9, and the Irish 26·4. As the proportion of married women aged 15 and under 55 to the female population at all ages is considerably lower in Ireland than in England, the number of legitimate births in Ireland must necessarily be less than the number in England.

The English and Scottish death-rates were exactly the same, 21 per 1000 of population. The Irish death-rate, owing chiefly to defective registration, was only 17·3.

* See Twelfth Annual Report of the Registrar General of Ireland, p. 31.

MORTALITY OF THE ARMY.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1876 was 184,433, and the number of deaths was 2102; so the rate of mortality was 11·4 per 1000 of strength, or 0·9 per 1000 below the rate in the preceding year.

The average strength of the Army at home was 97,146, and the deaths were 930: the rate of mortality per 1000 strength was 12·4 among officers, and 9·4 among non-commissioned officers and men, the average annual rates in the 15 years 1861–75 being 9·9 and 11·1 respectively, so the mortality among officers serving at home in 1876 was 2·5 per 1000 above the average, while that of the non-commissioned officers and men serving at home was 1·7 per 1000 below the average.

TABLE 28.—ANNUAL RATE OF MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861–76.

YEARS.	AT HOME.		ABROAD.	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.
Annually in the 15 years } 1861–75 - - - }	9·9	11·1	13·9	18·1
In the year 1876 - - -	12·4	9·4	13·2	13·4
Excess or defect in 1876 -	+2·5	–1·7	–·7	–4·7

The average strength of the Army abroad was 87,287, and the deaths were 1172. The rate of mortality per 1000 of strength was 13·2 among officers, and 13·4 among non-commissioned officers and men, against an average annual rate in the 15 years 1861–75 of 13·9 and 18·1 respectively. The mortality among officers serving abroad in 1876 was, therefore, ·7 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 4·7 per 1000 below the average.

Thirty-eight per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 48 per cent. abroad.

MORTALITY OF THE NAVY.

Deputy Inspector-General T. R. Pickthorn, of the Royal Navy, reporting to Sir A. Armstrong, K.C.B., M.D., the Director-General of the Medical Department, on the sanitary condition of the service afloat in the year 1876, states that—

The total force in the service afloat was 45,010; the deaths were 416; so the mortality was 9·2 per 1000 force.

Compared with the preceding year there was an increase in the mortality of ·4 per 1000; in the cases of disease and injury of 38·6 per 1000, and of invaliding of 1·9 per 1000.

Compared with the average for 13 years there was a decrease in the death-rate of 1·4 per 1000, and in the cases placed on the sick list of 41·8 per 1000. In the ratio of invaliding there was an increase of 2·0 per 1000.

The number of deaths in the total force from disease was 270, and from wounds, injuries, and drowning 146. The death-rate from disease alone was 6·0, and from violence, including drowning, 3·2 per 1000, against 6·9 and 1·9, respectively, in 1875.

Of the 270 deaths from disease, 19 were referred to enteric fever, 4 to simple continued fever, 3 to yellow fever, 11 to remittent fever, 1 to cholera, 48 to consumption, 20 to heart diseases, 14 to aneurism, 25 to pneumonia, 13 to dysentery, 21 to other diseases of the digestive organs, 6 to kidney diseases, and 3 to delirium tremens. In every 100 deaths 35·1 were from drowning and other violence.

Of 100 deaths at all ages, forty-one were aged 15–25, thirty-one were aged 25–35, twenty-one were aged 35–45, and seven were aged 45 years and upwards.

The mean force employed on the *home* station was 20,800, and the deaths were 197, being in the proportion of 9·5 per 1000, against 7·5 in the previous year. The mortality from disease on this station was 5·8 per 1000 force, from violence 3·7 per 1000; against 6·3 and 1·2 in the previous year. The increased mortality from violence was chiefly owing to a boiler explosion in Her Majesty's Ship "Thunderer," whereby 35 officers and men lost their lives.

‡ Including the deaths by the loss of Her Majesty's ship "Bombay."

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88. commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me, and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book kept for the purpose at this office called the Marine Register Book. The numbers recorded in the year 1876 were 469 births and 4208 deaths.

364 births of children and 738 deaths (including 3 of soldiers, marines, or seamen from the Royal Navy) occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The number of mariners at sea, exclusive of masters, in registered vessels, in the year 1876 as reported by the Registrar-General of Shipping and Seamen, was 198,638. The deaths (including some of those which occurred on board colonial and fishing vessels) were 4151, and the rate of mortality was 20·9 per 1000 of the registered strength. The average annual mortality in the 24 years 1852–75 was 21·5.

The number of mariners in the merchant service, exclusive of masters, whose deaths were referred to *drowning*, are shown in Table 30, together with the mortality by *drowning* in the Royal Navy in each of the years 1866–76.

Average in the 10 Years 1866–75 -	199,064	1659	1053	2712	8·3	5·3	13·6	47,585	115	2·4
1876 -	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those “*reported*” in each year.

† Including the deaths by the loss of Her Majesty's ships “*Captain*” and “*Slaney*.”

In the 10 years 1866–75, 27,119 lives were reported as lost in the merchant service by drowning; 16,588 by wreck, and 10,531 by accident: the average annual number drowned in those years was 2712 or 13·6 per 1000 strength. The proportional number lost by wreck was 8·3 and by accident 5·3 per 1000.

WILLS.

A return in the annual report of Judicial Statistics for the year ending 31st October 1876, by the Senior Registrar of the Court of Probate, shows that the number of probates and administrations granted at the Principal Registry during the year was 17,251. The value of the effects was sworn under 73,258,190*l*.

The returns furnished by the district Probate Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 28,462. The value of the property under which these probates and administrations were sworn was 53,772,178*l*.

The results for the Principal and District Registries combined were—probates and administrations 45,713—value of effects sworn under 127,030,368*l*. The average value of each was 2779*l*. against 2788*l*. in the previous year. The proportion of the cases in which people dying above the age of 21 left wills, or left estates on which letters of administration were taken, was 1 in 6, or 17·5 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

EUROPEAN STATES.

Through the courtesy of Dr. Becker, Director of the Statistical Department of the German Empire, and of Mons. Keleti, Chief of the Statistical Bureau of Austro-Hungary, I am now enabled to publish returns of the vital statistics of the German Empire and of Hungary.

These returns, together with the usual details relating to the vital statistics in other Foreign States, will be found in a series of tables on pp. cix–cxv.

TABLE 31.—EUROPEAN STATES.

* The mean annual rates for Spain are for the ten years 1861–70, those for Italy are for the ten years 1863–72.

The population of the German Empire at the Census of 1875 was 42,515,472, and it is now estimated at 43,072,342. In the year 1876 the marriage-rate of the Empire (persons married to 1000 of population) was 17·0, or 2 per 1000 less than the average annual rate in the five years 1872-76. The birth-rate in 1876 was 40·8 per 1000, which was slightly in excess of the average, 40·1; the death-rate was 26·3, the average rate in the five years 1872-76 being 27·6. The rapid decrease in the marriage-rate of the German Empire may be taken as an indication of the severe commercial distress that prevailed after the war and in spite of the war indemnity of 220,000,000*l.* sterling that had been paid by France; but it is remarkable that while the marriage-rate of the German Empire rapidly decreased during the last five years, the birth-rate slightly increased. The decline of the death-rate is encouraging, and leads us to hope that the skill and energy which have achieved the unity, will secure the health, of the nation. There is no reason why the Germans should die at a faster rate than the Swedes, Danes, English, and French. The statistics will show where the evils lie.

TABLE 32.—GERMAN EMPIRE.

YEARS.	PROPORTIONS per 1000 of Population.	
	Persons Married.	Births.
1872 - -	20·6	39·4
1873 - -	20·0	39·7
1874 - -	19·1	40·1
1875 - -	18·2	40·6
1876 - -	17·0	40·8

The population of Hungary, exclusive of Croatia and Sclavonia, at the Census of 1869 was 13,685,852. In the year 1875 it is estimated at 13,525,945. The marriage-rate in that year was 21·9 per 1000 of population against an average in the 10 years 1866-75 of 21·4: the birth-rate was 45·2, against an average of 42·2; and the death-rate was 37·2 per 1000 of population, or 2·5 below the average of the 10 years. In the years 1873 and 1874 cholera was epidemic: in the former year it raised the death-rate as high as 65·1 per 1000.

For Italy nature has done much, but the health of the population is in a very unsatisfactory state; it demands the attention of her scientific men, of her municipalities, and her enlightened government. Why should so many more children perish in Italy than in other countries? Why are so many men and women cut off in the prime of life by fever? Italy has outlived the age of ruins and of insanitary dwellings.

The "*Journal Officiel de la Republique Francaise*" publishes the results of the enumeration of the population of France at the Census of 1876. The Census is taken every five years in France, but owing to the Franco-German War in 1870-71 the Census which should have been taken in 1871 was not taken till 1872, so a period of only *four* years has elapsed between the two last enumerations.

At the Census of 1872 the population of France was - 36,102,921

At the recent enumeration in 1876 it was - - 36,905,788

showing an increase of - - 802,867

or 2·23 per cent. in the four years, equivalent to 0·551 per cent. annually.

At the Census of 1876 the territorial sub-divisions of France consisted of 362 arrondissements, 2863 cantons, and 36,056 communes ; the number of arrondissements remaining the same as in 1872, but the number of cantons being two less.

The greatest increase of population since 1872 occurred in the following seven departments :—

					Increase of Population.
Finistère	-	-	-	-	23,143
Gironde	-	-	-	-	30,093
Loire	-	-	-	-	40,002
Marne	-	-	-	-	21,623
Meurthe et Moselle	-	-	-	-	39,472
Nord	-	-	-	-	71,821
Seine	-	-	-	-	190,789
Total	-	-	-	-	416,943

In 20 departments there was a decrease of population, chiefly attributable to a diminution in the number of marriages, to an excess of deaths over births, to modifications introduced in agricultural pursuits, and to the consequent emigration of the inhabitants to the great centres of industry. About two-fifths (329,656) of the total increase of population in France in the four years 1872-76 occurred in 38 towns having a population of 30,000 inhabitants and upwards.

In Paris the population at the Census of 1872 was 1,851,792, at the Census of 1876 it was 1,988,806, showing an increase of 137,014. The annual rate of increase was 1.801 per cent.

The following results show the numbers enumerated under the three heads of civil condition at each of the Censuses of 1872 and 1876 :—

TABLE 33.—CIVIL CONDITION of the POPULATION of FRANCE at the CENSUSES of 1872 and 1876.

CIVIL STATE.	MEN.		WOMEN.		Increase in the Four Years 1872-76.	
	1872.	1876.	1872.	1876.	Men.	Women.
Bachelors or } Spinsters	9,630,456	9,805,761	8,844,768	8,944,386	175,305	99,618
Married - -	7,344,519	7,587,259	7,316,730	7,567,080	242,740	250,350
Widowed - -	1,007,536	980,619	1,958,912	2,020,683	(Decrease) -26,917	61,771
TOTAL - -	17,982,511	18,373,639	18,120,410	18,532,149	391,128	411,739

The increase of population in the four years 1872-76 it will be observed has been greater among females than males.

TABLE 34.—NUMBER of MALES and FEMALES ENUMERATED in FRANCE at the CENSUSES of 1872 and 1876.

SEX.	1872.	1876.	Increase.
Males - -	17,982,511	18,373,639	391,128
Females - -	18,120,410	18,532,149	411,739

In the subjoined table the vital statistics of ten European States are returned, the States being arranged in the order of their respective average annual birth-rates. The rates are for the five years 1872-76, and are therefore undisturbed by any fluctuations from war.

TABLE 35.—AVERAGE ANNUAL RATES of BIRTHS, MARRIAGES, and DEATHS in TEN EUROPEAN STATES in the Five Years 1872-76.

STATES.	Average Annual Birth-rate.	Average Annual Marriage-rate.	Difference between the Birth and Marriage Rates.	Average Annual Death-rate
Hungary* - - -	42·8	21·9	20·9	46·8
Austria - - -	40·3	17·6	22·7	32·3
The German Empire - -	40·1	19·0	21·1	27·6
Prussia - - -	40·1	19·1	21·0	27·0
Italy - - -	37·1	15·8	21·3	30·1
Netherlands - - -	36·2	16·6	19·6	24·2
England and Wales - -	35·9	17·1	18·8	21·7
Denmark - - -	31·2	16·3	14·9	19·6
Sweden - - -	30·7	14·2	16·5	18·7
France - - -	26·3	17·2	9·1	22·5

* For Hungary the rates are for the four years 1872-75.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

REMARKS ON THE METEOROLOGY OF 1876.

BY JAMES GLAISHER, Esq., F.R.S., &c.

THE most remarkable occurrences during the year were the unusual frequent falls of snow in the first four months of the year, especially in the month of April; and the long continued periods of low barometer readings in March and December.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer throughout the month of January were (with the exception of two days) above their average values. During the first four days of February the readings were a little in excess of the average, but from the 5th of February to the first of April the readings were all below their averages (with the exception of two days, viz.:—24th February and 20th March). During this period of 57 days the readings of the barometer were at times as much as one inch in defect of the average for two and three days together, and the mean amount in defect for the 57 days was 0·35 inch. From the 2nd to the 8th of April the readings were above their averages, they were below from the 9th to the 14th; and alternately above and below for short intervals from the 15th to the end of the month. From the 1st to the 21st of May the readings were all above their average values, they were below from the 22nd to the 27th, from the 28th of May till the end of June the barometer readings were alternately above and below their averages for a few days together. During the first eight days of July the readings were generally below, and with the exception of four days they were above their average values from the 9th July to the 13th of August, they were alternately above and below from the 14th to the 18th of August. From 19th August to 18th September the readings of the barometer were all below their average values, they were above on the 19th, 20th, 21st, and 22nd, and again below from the 23rd to the end of the month. The barometer readings were above their averages from the 1st to the 8th of October (with the exception of the 4th), they were below from the 9th to the 19th (with the exception of the 15th); from the 21st of October to the 10th of November they were above their average values, and alternately above and below from the 11th of November to the end of the month. Throughout the month of December the barometer readings were below their averages, with the exception of four days which were a little in excess of the average. On many days the readings were more than one inch below their averages. The mean reading for the month of December was 29·31 inches, being 0·49 inch below the average. The highest reading in the year was 30·480 inches on 15th January, and the lowest 28·209 inches on the 4th of December; thus giving a range of 2·271 inches.

Temperature.—From the 17th of December 1875 to the 4th of January 1876 the weather was mild, and the wind mostly from the S.W., on the 5th of January a cold period set in and lasted till the 16th, the mean amount below the average for these 12 days was $6\frac{3}{4}^{\circ}$. On the 17th a warm period set in and lasted until the 3rd of February, the weather was then again cold from the 4th to the 13th, but on the 14th of February another warm period began and continued till the 8th of March, and the average daily excess for these 24 days was $6\frac{1}{4}^{\circ}$. On the 9th of March the third long cold period began, and lasted till the 27th, and the average deficiency of temperature for the 19 days ending the 27th was $3\frac{3}{4}^{\circ}$, from the 28th of March till the 9th of April the weather was warm, and the average daily excess of temperature for this period was $5\frac{1}{2}^{\circ}$. On the 10th of April a very

severe cold period set in, and snow fell generally over the country north of latitude 51° , on the 11th and 12th it fell more generally, and there were falls of snow in Cornwall and Devonshire. London was visited by a succession of snow-storms, accompanied with vivid lightning and loud thunder; on the 13th the weather was very severe, and it was experienced in all directions, a very great quantity of snow fell, and traffic between London and the North was impeded. On the 14th of April the most severe snowstorm of the whole winter was experienced. The severe cold weather somewhat moderated on the 15th, but it continued till the 19th. On the 20th a warm period set in and lasted till the 29th, the average daily excess for these 10 days being only 2° . From 30th April till 18th June the weather was cold, the wind was mostly from the E. and N.E., and from the 1st to the 20th of May no rain fell; the average deficiency of temperature for the 50 days ending 18th June was $3\frac{1}{2}^{\circ}$. From the 19th of June till the 22nd of August the weather was warm, and at times very hot, especially in the middle of the months of July and August, when the mean daily temperatures were as large as from 13° to 15° in excess of the average; scarcely any rain fell till after the middle of the month of August, and the mean daily excess of temperature for these 65 days was $3\frac{1}{2}^{\circ}$. On 23rd August a complete change of weather set in, and rain fell continuously; the weather was cold till 17th September, and the average daily deficiency was $3\frac{1}{2}^{\circ}$; from 18th September till 20th October the weather was warm with frequent rain, and the average excess of mean daily temperature was 4° ; from 21st October till 12th November the weather was mostly cold, and but little rain fell, the average deficiency of temperature for this period was $3\frac{1}{4}^{\circ}$, and from 13th November to the end of the year the weather was mostly warm with frequent rain; and the average daily excess for the 38 days was $4\frac{1}{4}^{\circ}$. The average daily excess for the last five days of the year was no less than $12\frac{1}{4}^{\circ}$.

The mean temperature of the air for the month of December was $44^{\circ} 1'$, and in the preceding 105 years there have been only nine instances of so high a mean temperature in December.

Rain-fall.—The fall of rain in January was 1.1 in., being 0.8 inch below the average; in February it was the same as the average, viz., 1.5 inch; in March the fall was 2.3 inches, being 0.7 inch above the average. The fall in April was 1.3 inch, in May was 1.1 inch, and in June was 1.1 inch, being respectively 0.4 inch, 1.0 inch, and 0.9 inch below their averages. From 1st April to 30th June, rain fell on 24 days only, and during the first 21 days in May no rain fell. In July the fall of rain was 0.7 inch, being 1.9 inch below the average; and back to 1815, there are but six instances when the fall in July was as small as 0.7 inch. The fall in August 2.0 inches, being 0.4 inch below the average. The falls of rain were below their averages for five successive months, and the total fall for the five months ending 31st August, was 6.2 inches, being no less than 4.6 inches below the average. In September the fall of rain was 2.6 inches, being only 0.1 inch in excess of the average; in October the fall was 1.6 inch, being 1.2 inch below the average; in November it was 3.1 inches, being 0.8 inch above the average; and in December the fall was 5.8 inches, being as much as 3.8 inches above the average. The total fall from 1st November to 31st December, was 8.9 inches, being 4.6 inches above the average, and in the preceding 61 years there is but one instance of so large a fall in these two months; viz., in 1821, when it was 9.9 inches. There is no instance of so large a fall in December back to 1815. The total fall of rain during the year was 24.2 inches, being 1.2 inch below the average, and the number of days on which rain fell was 167. The total falls of rain in the year ranged from 54.10 inches at Allenheads, 48.15 inches at Lampeter, 47.04 inches at Stonyhurst, and 46.02 inches at Truro, to 21.02 inches at East Tilbury, 24.28 inches at both Ramsgate and Chiswick, and 24.50 inches at Cambridge. The

greatest number of rainy days in the year were 240 at Nottingham, 230 at Allenheads, 223 at both Calcethorpe and Bywell, and 222 at North Shields; and the least were 143 at Chiswick, 153 at Ramsgate, and 157 at East Tilbury.

Thunder storms occurred on 70 days during the year, of these, 14 were in September, 11 in August, 9 in March, 7 in April, 6 both in June and July, 5 in February, 4 both in October and December, 2 both in May and November, and there was none in January. The storms of March, June, and July were mostly in the Northern Counties; those in April were chiefly in the Midland Districts; those in August and September were general; and in October, November, and December were mostly in the South.

Thunder was heard, but lightning was not seen, on 71 days during the year. The greatest number of days in one month was 13 in August, and the least one in both November and December. *Thunder was not heard* at any place in January.

Lightning was seen, but thunder was not heard, on 57 days during the year, none of which were in either January or May.

Solar Halos were seen on 85 days in the year. On 13 in June, 11 in February, 10 in March, 9 both in April and July, 8 in May and September, 6 in August and October, 3 in January, 2 in November, and no days in December, and when seen at one place were generally seen at all parts of the country.

Lunar Halos were seen on 60 nights in the year. On 13 in March, 10 in October, 8 in December, 6 both in February and November, 4 both in April and September, 3 both in January and May, 2 in July, 1 in June, and none in August, and were generally visible over the country at the same time.

Auroræ Borealis were seen on the 19th of February at Calcethorpe, Liverpool, and North Shields. On the 1st of April at Stonyhurst and Leeds, on the 3rd at Leicester, on the 14th at North Shields, and on the 19th at Weybridge; on the 13th of June at Halifax; and on the 5th of December at Weybridge.

Snow fell on 15 days in January, 18 days in February, 19 days in March, and 8 days in April, and the falls were pretty general all over the country. Snow fell on 3 days in May, 7 in November, and 7 in December, or on 77 days during the year. The falls in November were pretty general, but in December they were more confined to the Midland and Northern Counties. The latest day in spring on which snow fell was May 14th at Allenheads, and the first day it fell in the following autumn was November 7th at Royston, Bywell, and North Shields.

Hail fell on 80 days during the year; 47 of which were in February, March, and April. The least number of days in any month was 1 in October, and the greatest 20 in March.

Fog prevailed on no less than 160 different days during the year (exceeding the number recorded in 1875 by 8 days), and they were distributed as follows:—January 20, February 11, March 7, April 18, May 4, June 6, July 7, August 10, September 19, October 16, November 21, and December 21.

Throughout the year fog was very much less frequent in the Southern Counties than either in the Midland or Northern Districts.

PRELIMINARY TABLES.

TABLE 1.—Estimated **Population**, and Number of **Marriages**, **Births**, and **Deaths** registered in **England** in each of the Thirty-nine Years **1838–76**.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	333,984	153,590

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841–51–61–71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 60.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in each of the Thirty-nine Years 1838-76.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.
1838 - -	15·4	30·3	22·4	65	33	45
1839 - -	15·9	31·7	21·8	63	31	46

Mean in 39 years	16·6	34·1	22·3	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—Marriages in England in each of the Thirty-six Years 1841-76;
those solemnised according to, and not according to, the Rites of the Established
Church; Civil Marriages; and detailed information respecting the Marriages in
the Churches of the Established Church.

Mean Annual Rate per 1000 in each quarter during the 39 years					13·8	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 7.—Marriages in England. The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers** or **Widows**, in each of the Thirty-six Years **1841-76.**

1876	220,080	226,097	216,302	215,489	38·1	37·4	35·4	35·3
Mean Annual Rate per 1000 in each Quarter during the 39 years					35·6	35·2	32·8	32·6

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, see note to Table G.

TABLE 15.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Thirty-nine Years 1838–76.

YEARS.	NUMBER OF BIRTHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF BIRTHS.				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Average proportion in 39 years, 1838–76 -			23·3	21·3	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths of males; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the *relative* mortality of males and females; and that out of equal numbers living the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 20.—Deaths of 57 Persons (14 Males and 43 Females) REGISTERED in ENGLAND and WALES during the Year 1876 and RETURNED as Aged 100 Years and upwards.

District Numb.	DISTRICT.	DATE OF DEATH.	PLACE OF DEATH.	SEX.	STATED AGE.	OCCUPATION.	CAUSE OF DEATH.
1a	Fulham - - -	18 June -	1, Dartmouth Road, Hammer-smith.	M.	103	Schoolmaster -	Age.
"	" - - -	28 October -	Workhouse - - -	F.	103	Not known -	Age.
3	St. Geo. Hanov. Sq.	17 October -	Whitaker Street - - -	F.	101	Wid. bookbinder -	Age.
21	St. Saviour Sthwrk.	4 October -	43, Elliot's Row - - -	F.	101	Wid. tailor -	Age.
24	Wandsworth - -	9 April -	8, Cross Street, Battersea -	F.	100	Wid. sawyer -	Age.
26	Greenwich - - -	2 Jan. -	Workhouse - - -	F.	100	Wid. cooper -	Age.
56	Canterbury - - -	9 October -	22, Watling Street - -	F.	105	Wife gentleman -	Age.
111	Newbury - - -	27 Nov. -	Almshouse - - -	F.	101	Wid. blanket maker	Age.
128	Edmonton - - -	8 July -	Pleasantire Hall, Marsh Side	M.	103	Optician - - -	Age.
162	Wellingborough -	12 Nov. -	Earls Barton - - -	F.	100	Wid. shoemaker -	Age.
174	Leighton Buzzard -	24 March -	Wing - - -	F.	100	Wid. farmer -	Age.
182	North Witchford -	9 Nov. -	Chatteris - - -	F.	100	Wid. labourer -	Age.
200	Dunmow - - -	16 Sept. -	Hatfield - - -	F.	100	Wid. agricul. lab. -	Age.

Note.—The Table may thus be read :—Of each 1000 male children living under five years of age, 72·2 died in each of the 39 years 1838-76 ; in the five years 1841-45 this proportion averaged 69·0 per 1000 ; and in the five years 1871-75 it was 70·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 66), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

Note.—The Table may thus be read :—Of each 1000 female children living under five years of age, 62·3 died in each of the 39 years 1838-76; in the five years 1841-45 this proportion averaged 58·8 per 1000; and in the five years 1871-75 it was 60·2.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 66), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

Mean Annual Rate per 1000 in each Quarter during the 39 years					24·9	22·0	20·6	21·8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1888, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see note to Table 6.

TABLE 30.—Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter* of each of the Thirty-nine Years 1838–76.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in the Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies an Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the five years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the Districts or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. signifies Improvement District.

* For method of framing these estimates see note * to Table 38. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Coventry, Dudley, Wigan, and Barrow-in-Furness have been based upon local information as to the increase of inhabited houses in these boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, where the Workhouse is situated outside that area.

TABLE 38.—Population; Persons to an Acre; Births and Deaths; Annual Birth and Death Rates; Mean Temperature and Rainfall, in the 52 Weeks of the Year 1876, in LONDON and TWENTY-TWO other LARGE TOWNS of the UNITED KINGDOM.

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situated outside the Municipal boundaries.

* The figures in this column, excepting those for Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1876 by the addition of $5\frac{1}{4}$ times the annual rate of increase which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in 1871.

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1876 will not agree with those given on page 100, which relate to the correct year instead of the 52 weeks; moreover, the same Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no In-pensioners have been received there.

Average Number living to One Annual Death in 37 years - - - }	41	44	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered during each natural year from 1st January to 31st December.

Hampstead and Lewisham did not form part of London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

* For the years 1849-59 the results are only approximative, having been reduced to Robinson's Anemometer from observations made with Whewell's.

† By Robinson's Anemometer.

Note.—Hampstead and Lewisham did not form part of London prior to 1847.

NOTE.—The numbers for 1837 were registered in the half year ending 31st December.

TABLE 49.—Area, estimated Population, and Marriages, Births, and Deaths registered in the United Kingdom, in the Year 1876.

	AREA IN STATUTE ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1876.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,635,301	31,416,757	33,093,439	254,825	509,650	1,155,186	676,761
Great Britain - -	56,815,354	22,991,528	27,771,821	228,437	456,874	1,014,717	584,437
England and Wales -	37,319,221	15,102,008	24,244,010	201,874	403,748	887,963	510,315
Scotland - - -	19,496,133	7,889,520	3,527,811	26,563	53,126	126,749	74,122
Ireland * - - -	20,819,947	8,425,229	5,321,618	26,388	52,776	140,469	92,324

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 50.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1876.

	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2·35	·95	7·70	15·4	34·9	20·5
Great Britain - - -	2·05	·83	8·23	16·5	36·5	21·0
England and Wales - -	1·54	·62	8·33	16·7	36·6	21·0
Scotland - - - - -	5·53	2·24	7·53	15·1	35·9	21·0
Ireland - - - - -	3·91	1·58	4·96	9·9	26·4	17·3

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the “density” of the population, or the population to each acre, square mile, or other measure.

TABLE 51.—Population, Area, Births, and Deaths in the Islands in the British Seas in the Twenty-six Years 1851-1876.

TOTAL	1,549,010	5,467,075	1,165,628	243,229	8,424,942
Average annual emigration from the United Kingdom					{ From 1815 to 1876 - 135,886 { For the 10 years ending 1876 - 231,855

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815-24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; and 109,469 in 1876.

In the 25 years 1852-76	4,648,495	99,737	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 65.—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,151 Seamen** reported to the BOARD OF TRADE in the Year 1876 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of 1877.*)

TABLE 67.

ESTIMATED POPULATION OF THE UNITED KINGDOM,
(including ISLANDS in the BRITISH SEAS)
with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 66, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (see p. vii. of Vol. I. Census of England and Wales, 1871).

TABLE 68.—Logarithms of the above Populations of the UNITED KINGDOM.

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 - -	7·2122518	6·9082749	6·9141489
1811 - -	7·2679345	6·9635210	6·9702620

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in 1853; in Sweden in 1853, 1857, and 1866; in Austria in 1866 and 1873; in Hungary in 1866, 1873, and 1874; in Prussia in 1866; in Belgium in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in 1871; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and 1864; in Austria in 1866; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860. Previous to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

TABLE 72.—SWEDEN. **Population; Number, and Proportion** per 1000, of **Persons Married, Births, and Deaths**, in each of the Years **1850 to 1876**.

(Supplied by Dr. Berg, Chief of the Statistical Department of Sweden.)

1876	4,429,713	31,184	62,368	135,890	86,334	14·1	30·7	19·5

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.

† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths (the highest number in any year since 1801), scarlet fever 2418 deaths, and typhus and typhoid fever 2149 deaths.

TABLE 73.—AUSTRIA. **Population; Number, and Proportion** per 1000, of **Persons Married, Births, and Deaths**, in each of the Years **1853 to 1876**.

(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 the States of Italy were included; since 1864, however, they are excluded. The facts for Hungary and Transylvania for years subsequent to 1865 appear in Table 74.

* Census years.

† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE 74.—HUNGARY AND TRANSYLVANIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1866 to 1876.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1-60 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

TABLE 30.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTIONS PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,868	130,731	261,462	624,096	417,764	16·5	39·3	26·3
1862	16,065,124	128,696	257,392	615,919	430,663	16·0	38·3	26·8

1864	16,340,323	126,303	252,606	629,546	499,486	15·5	38·5	30·6
1865	16,423,793	128,917	257,834	622,050	538,580	15·7	37·9	32·8
1866	16,579,090	131,981	263,962	618,981	463,684	15·9	37·3	28·0
1867	16,716,151	118,409	236,818	624,212	487,151	14·2	37·3	29·1
1868	16,853,212	111,684	223,368	579,464	548,690	13·3	34·4	32·6
1869	16,883,986	137,120	274,240	602,287	550,660	16·2	35·7	32·6
1870*	16,935,613	105,543	211,086	599,786	509,669	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 31.—ITALY (inclusive of VENETIA). Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1863 to 1876.

(Furnished by Professor L. Bodio, Director of General Italian Statistics.)

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome) where the census was not taken until 1872, is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, not being legally recognized, escaped registration; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 82.—Changes in the Constitution of the Superintendent Registrars' Districts and Registration Sub-districts during the Year 1876.

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District.]

* The Registration or Union Counties* consist of groups of Superintendent Registrars' Districts which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They not include space occupied by foreshore or tidal water of rivers and creeks.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 90 cases of marriage after divorce, see Table 11, page lviii.

Abstract of Marriages, 1876.

ABSTRACT OF MARRIAGES.—Marriages registered in England, pursuant to

REGISTRATION OR UNION COUNTIES.		AREA in Statute Acres.	POPULATION, 1871.	TOTAL MARRIAGES.	MARRIAGES.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal part of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1876—continued.

* The Superintendent Registrars' Districts (632 in number at the end of the year 1876) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by H for Hospital or Infirmary, L for Lunatic Asylum, and w for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

* The Sub-districts (2190 in number at the end of the year 1876) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1876 are given on pages 99-119.

‡ For the change made in the sub-district of Berwick Street (4 : 2) see Table 82, page cxvi.

DEATHS IN PUBLIC INSTITUTIONS, 1876.

THE following pages contain the numbers of deaths registered during 1876 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1410 Institutions; of which 716 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 611 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1410 Institutions 46,235 deaths were registered during the year, or 9·1 per cent. of the total deaths in England and Wales, against 8·7 and 8·8 per cent. in the two preceding years; 29,268 occurred in Workhouses, 12,354 in Hospitals, and 4613 in Lunatic Asylums. Each of these totals was below the corresponding number in 1875, and the proportion to total deaths was 5·8 in Workhouses, 2·4 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1876.

					WORKHOUSE - - -				

* This Institution was disused as an Infirmary during the latter part of 1876, and the building has since been adapted for a Workhouse Industrial School.

† In Vernon House, private Lunatic Asylum, no death occurred during the year.

‡ This Workhouse was opened for the reception of in-paupers on 6th November 1876.

Deaths registered in the Public Institutions of England in the Year 1876—continued.

**CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND
AND LONDON.**

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

**DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES,
AND DISTRICTS.**

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated “Heart Disease,” in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is that disease of the organs without any further distinction.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND in 1876, by WILLIAM FARR, Esq., M.D., F.R.S.	225
TABLES (MISCELLANEOUS)	258
TABLE of CAUSES OF DEATH in ENGLAND in 1876, classified in accordance with the NOMENCLATURE drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS OF LONDON	288

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES OF DEATH in
ENGLAND AND WALES, by W. FARR, Esq., M.D., F.R.S.

YEAR 1876.

SIR,

YOUR Report shows that the deaths of 510,315 men, women, and children were registered in the year. It is not thought enough in England to record the fact, the date, and the place of every death. "Why did this man, this woman, this child die?" is the question addressed in the first place to the informant, in the second place to the registered medical attendant, in the third place to the coroner. The medical attendant generally certifies the cause of death in conformity with instructions; and his name is entered in a column of the register. Of the importance of this special inquiry there can be no doubt. The slightest consideration shows that many causes can be controlled.

In the earlier ages when little was known of medical science, and when the passions of men were violent, attention was drawn to homicides; against murder the laws were chiefly directed, and the execution of murderers was the recognised remedy. The black death, sweating sicknesses, plagues, much more fatal than homicides, were looked upon as direct divine inflictions; and not as the results of violations of the laws of nature. These laws are now understood; and true causes are sought.

The advance of science leads us through several links of chains of causes; some of which are evident, while others can only be traced by the collation of innumerable observations under various conditions of time and place. The death of a man from a stab in the chest prompts us to inquire whether the stab was in the heart or in the lungs: and if in the lungs whether it was followed by emphysema, pleuritis, or pneumonia terminating fatally in a given number of days: then further what motive led to the stab; whether it was inflicted by an assassin deliberately, by a foe in the field, by an adversary in a duel, by a stranger in the heat of passion, or by a careless friend; or finally whether it was self-inflicted, and under a peculiar state of mind. Pneumonia is not only caused by wounds; it is induced by cold of different degrees of intensity; and the degree in which this cause operates at different ages in the two sexes is only determinable by the analysis of the extensive observations registered in comparison with exact daily and nightly meteorological returns extending over series of years. Pneumonia has in past times been recorded as an epidemic; but it was probably then confounded with influenza. In deaths by the zymotic diseases there is (a) the disease itself—say small-pox and the secondary diseases to which it may give rise, such as pneumonia; and (b) the infectious source from which the disease sprang. In prevention this plays an influential part; and the efficiency of this branch of medicine depends upon a thorough knowledge of Etiology which has not hitherto been sufficiently studied in the schools for the want of data such as the registers in part supply.

It will be observed that the statistical nosology is as it should be etiological. It divides deaths into five classes, which may be arranged circularly into those caused (1) by *zymotic diseases*—and referable, as small-pox is to extraneous organisms, and usually to men; (2) by *constitutional diseases* generally yielding new products as cancer springing up in the body of the suffering person; (3) by *local diseases* of particular organs; (4) by *developmental diseases* which result from the birth, growth, or decay of the individual; or (5) evidently by physical, chemical, electrical agents—such as act in suffocation, blows, wounds, drowning, fire, lightning, and venomous or other bites. Thus the circle begins with remoter organic causes outside the organism; then it includes causes (2, 3, 4) originating within the body; and finally it returns (5) to physical causes evidently acting from without.

The specific causes of every death being registered—as far as known—under some 270 names as in the Table on pp. 148–155, it is evident that they admit of a number of possible arrangements which could be only calculated by the continuous multiplication of the numbers 1, 2, 3 . . . up to the last. Then they may be thrown into any number of groups. Now practically, several such groups have been formed and that with reference to the main objects in view. Thus, in medical practice, diseases have been divided into surgical cases, medical cases, and cases of midwifery. There is a debatable land; but the line is well drawn between the two main groups in the classical works of Sir Thomas Watson and Mr. Erichsen. Surgery (chirurgery, handicraft) takes all the cases of mechanical violence and cases where mechanical aid can be in any way rendered by operations or otherwise; thus it claims all the Class V. of our classification. It takes syphilis, cancer, scrofula, ovarian dropsy, joint diseases, ulcer, abscess, stone, and certain other affections which will be readily distinguished. The rest, including the majority of fatal diseases, it leaves to medicine.

Another classification which found some favor at the Paris Congress—leaving hygienic considerations aside as they were not then sufficiently thought of—divided diseases into *acute* diseases and *chronic* diseases; a practical distinction of considerable weight in jurisprudence.

A pathological classification places together in great groups all diseases of the same nature such as inflammations, tuberculoses, cancers, atrophies, hypertrophies, and so on, treating the parts affected as of subordinate value. This I tried in the Second Report, in which the causes of death for the year 1838 are shown according to this classification.*

The First Report exhibits a first attempt at Nosological classification in two groups; the first of epidemic, endemic, and contagious diseases, which is recognised by Hippocrates and by historians, and is retained in the zymotic class; the second of sporadic diseases including those of uncertain or variable seat (*morbi de incerta sede*) now called constitutional diseases; and local diseases: the final group included deaths from external causes. This classification with slight modifications was used down to the 20th Report; and it is still retained in Scotland. Since the 21st Report the present classification has been used.

The arrangement followed in the nomenclature of the College of Physicians is displayed in the Table 26, pp. 288–292.

In the following commentary I find it most convenient to treat the causes of death grouped as hitherto etiologically in five classes. The progress of medicine has now established the zymotic class.

I.—ZYMOTIC DISEASES.

96,660 persons died of diseases of this class; the greater number, 89,647 of the miasmatic order. Scarlet fever has been the prevailing disease

* Registrar General's 2nd Report, pp. 156–7.

since the year 1870, when it was extraordinarily fatal. Measles and whooping-cough were fatal each to about ten thousand children. There has been a decided decline of fever, which was, however, fatal to 10,746 lives, of which three-fourths were returned as dying from enteric or typhoid. The decline has been progressive since 1865-9, when the rate of death from the three forms, namely, typhus, enteric, and simple, was 934 (in 1,000,000 living); in the next quinquenniad it was 657; in 1875 it was 548; and finally in 1876 it was 445. By stricter attention to the water supply, the milk supply, washing, and other ways through which the specific germs (*Enterads*) of enteric fever are conveyed the ravages of this disease may be mitigated if not suppressed.

Of the enthetic diseases *syphilis* is the most fatal, and 2141 deaths were referred to it directly, while 280 deaths of men were referred to stricture of urethra, the consequence generally of gonorrhœa. The increase in the numbers of such deaths may be only apparent; and may imply no more than increased knowledge, or more accurate certificates. Upon referring to pages 148-9, it will be seen that 1718 of the dying from syphilis were children under 5 years of age; the sins of the fathers and mothers here had indeed been visited upon the children, and cut off their lives. Only 9 died of the age of 5 and under 15. The adults were 407 of the age of 15 and upwards; of whom 209 were men, 198 were women. The greatest number of men and women died at the ages 25-45.

53 persons, namely, 45 males, 8 females died of *hydrophobia*; women living much in-doors being least exposed to the bites of rabid dogs. In the years 1856-63 the deaths from hydrophobia were 26, or 3 annually. In the year 1862 only one death was ascribed to this cause. Not so now. In the last seven years 316 persons died of this dire disease; or 45 annually. It is probable that more dogs have been kept. But neither this nor the neglect of police regulation accounts for this extraordinary increase. The disease (*lyssa* in Greek) is caused by zymotic animal poison (*lyssine*) which varies in strength under conditions that require investigation.

There is a distinction between the zymotic germs, which for shortness may be called zymes, and poisons such as that of the *cobra capella*, which some researches lately presented to the Royal Society tend to show can be crystallized. My friend Dr. Richardson, apparently confounds the two matters; and considers the saliva of the dog that produces hydrophobia, of the same nature as the venom of the serpent. But there is a marked difference; the venom of the serpent is no more reproduced in any dog it slays than prussic acid; the *lyssine* is reproduced in successive generations in dog after dog. In human beings the zymes of small-pox, measles, scarlatina, enteric fever, and typhus reproduce themselves in successive generations, with various degrees of energy in an infected population. There is nothing like this in simple poisons, even of animal origin, which comport themselves like morphia, oxalic acid, and hydrocyanic acid. These bodies have the characteristic properties of living bodies of the simplest form, be they called cells, corpuscles, granules, molecules, or germs. They are of different natures; thrive in different conditions, produce different effects, go through their evolutions in different periods of time*. They have this in common with parasites; they are only observed in alien organizations, and all we at present know of them is their effect on those organizations. But the effects are as well marked and as specific as the effects of chemical reagents, and are as easily identified. They are zymotic germs, or *zymes*. The Latin name *contagium vivum* sometimes used, has to me an air of clumsiness; and is not drawn from the nature of the bodies themselves.

* Splenic apoplexy, and some contagious diseases of cattle and pigs have been referred to *bacteria*, of which microscopists are attempting to distinguish species by definite characters.

In syphilis the syphilitic zyme (*syphilad*) evidently undergoes certain transformations similar to the metamorphoses of the lower organisms. The same may be the case with other zymotics.

The slaughter of rabid dogs that spread hydrophobia, of glandered horses, and of cattle killed to exterminate disease no doubt is effectual to a certain extent. In dealing with the infectious diseases of human beings there are other courses open; you strive (1) to prevent their generation, (2) to isolate the sources of infection, (3) to take the utmost care that the zymotic matters shall be destroyed, (4) to arrange that these matters shall not be spread by water, air, or clothing. In the case of syphilis under the Contagious Diseases Act precautions are taken in the ports and in garrison towns, the effects of which on the mortality by the disease will be watched with interest. The registered deaths from syphilis in all England were 595 in 1849, and 2141 in 1876. The annual deaths to a million living were 37 in 1850-4; 81 in 1870-4; 90 and 89 in 1875 and 1876. In thirteen districts containing eleven protected stations the annual mortality by syphilis declined from 141 in 1861-5 to 108 in 1870-4. In the rest of England and Wales the death-rate by syphilis increased from 65 to 80.

Among dietetic diseases generally there has been a slight increase chiefly referable to the want of breast milk. The deaths from purpura and scurvy are not numerous but they are two and a third times as many as they were in 1849. The deaths ascribed to privation were 73 in 1850 and 97 in 1876; in proportion to the population they have varied little.

Alcoholism.—Delirium Tremens and Intemperance.

The deaths ascribed to *alcoholism* or to alcoholic drinks deserve close attention; they are of two kinds, (a) deaths by delirium tremens, and, (b) deaths ascribed directly under various names* to intemperance. The number of such deaths was 817 in 1849 and 1120 in 1876. The proportion of deaths from alcoholism to population (*a million*) in the five quinquennials 1850 to 1874 was 46, 41, 40, 40, 34 *annually*; there was a decided and gradual decline from first to last. The decline was most striking in *delirium tremens* about the nature and cause of which there can be no mistake; unfortunately in the last two years the old level was attained, not as regards delirium but as regards alcoholism of other kinds. In the three years (1871-73) of high wages in the manufacturing districts the proportion of deaths by alcoholism was low. The deaths by drink rose on the other hand in the three years (1874-6) of depression probably because some sought consolation in drink, because the hours formerly spent in the workshop were spent in the public-house, or because the previous habits then began to bear fatal fruit. The fact remains, independent of any theory, that in three years of hard work and high wages—three years of prosperity—2230 people died of drink; while in the three years of idleness and reduced wages—three years of adversity—3316 died of the same causes—delirium tremens and other results of intemperance. This is contrary to a current opinion; and it may be worth while to point out that in the three years of prosperity the annual consumption of spirits in the United Kingdom was less than in the three years of adversity. It was 36 million gallons a year in prosperity, 42 million gallons a year in adversity. The working classes did not throw away their earnings to the extent some have asserted. The Savings Banks had a capital of £53 million at the beginning of 1871; to which 8,610,231*l.* were added in the three years of prosperity, 8,612,236*l.* in the years of adversity, making 70,280,120*l.* held at least to a considerable extent by the working classes.

* Alcoholism, intoxication, dipsomania, drunkenness, ebriositas, inebriety are the words occurring in the registers.

The ages at which deaths from alcoholism are registered are shown below.* They precede the ages at which deaths from insanity are most frequently recorded.

The greatest number of deaths from alcoholism was registered at 35-45, an age when the brain is most active ; the greatest number of deaths from insanity at 65-75.

The number of deaths in six years ascribed directly to alcoholism was 5546, rather more in number than the 5450 deaths referred directly to insanity. The ages are shown in the Table below.† As insanity induces paralysis so alcoholism induces diseases to which a certain number of cases of alcoholism are ascribed in the certificates. Cases of delirium tremens are not necessarily fatal, as under judicious treatment many patients recover ; and about their diagnosis there is little chance of mistake : for they can only be confounded with rare inflammations of the brain. This distressing disease is thus described in the lectures of Sir Thomas Watson. The picture is true to the life ; and should be carefully contemplated.

“ Let me remind you in a few words of the peculiar characters of delirium [tremens]. If you question the patient about his disease, he answers quite to the purpose ; describes, in an agitated manner, his feelings, puts out his tongue, and does whatever you bid him ; but immediately afterwards he is wandering from the scene around him to some other that exists only in his imagination. Generally his thoughts appear to be distressful and anxious ; he is giving orders that relate to his business to persons who are absent ; or he is devising plans to escape from some imaginary enemy. He is haunted by ocular spectra ; fancies that rats, mice, or other reptiles, are running over his bed : sees spiders crawling on the ceiling, or a horse’s head thrust through the wall of his room. He addresses remarks to strangers whom he erroneously believes to be present. He looks suspiciously behind the curtain, or under his pillow, and he is perpetually wanting to get out of bed ; but he is readily induced to lie down again. It is very seldom that he meditates harm,

“either to himself or to others; there is rather a mixture of cowardice and dread with the delirium.”*

The few cases of *delirium tremens* induced by shock from injuries, would be referred to those injuries, so that all the deaths under this head in the registers may be accepted as deaths by excessive drinking in some of its various forms.

The effects of great and excessive doses of alcohol are well known; and so are the effects of the excesses of habitual drunkards.

Ramazzini described very clearly the effects of alcohol breathed in small continuous doses in the distilleries of Modena; not in cellars but in open porticoes, where the alcoholic vapor was necessarily diluted. The men who work in this vapor for several months, and generally pass the winter in the distilleries grow, he says, “lethargic, shrivelled, emaciated, melancholic, vertiginous with loss of appetite.”† The next step leads us to the effects of drinking between meals through the day, which is also injurious, as is shown in the high rates of mortality among publicans and wine merchants. The effect of total abstinence has not yet been studied on a large scale, except so far as to show that no evident evil ensues, and that many under the regimen are perfectly healthy. I will show here in contrast the rates of mortality among two classes who differ considerably in habits, but have as a rule, ample supplies of the necessities of life; namely, the clergy and the publicans and others dealing in alcoholic drinks. Now the publicans, and certainly the wine merchants, are not as a *body* “habitual drunkards;” nor drunkards in any sense. There are drunkards among them, but they are exceptional, marked men; what as a class they suffer from must be “taking a glass” at intervals between meals with customers or in late hours alone. How fatal this tipping is the Table shows.

ANNUAL RATES of MORTALITY per 1000 at Four Ages among CLERGYMEN and PROTESTANT MINISTERS, and among PUBLICANS and WINE MERCHANTS.

AGES.	Clergymen.	Protestant Ministers.	Publicans, Beer-sellers, Wine and Spirit Merchants.
25—35	4·65	5·83	14·49
35—45	6·28	7·30	20·44
45—55	13·24	9·33	28·59
55—65	22·70	24·60	43·03

NOTE.—The facts on which these calculations are based are taken from the Supplement to the Registrar General's 35th Annual Report, pp. clxxii, clxxv.

A few devoted clergymen abstain from alcoholic drinks for various reasons, but they have not as a body “taken the pledge;” some of the new as well as the old school, [especially in cathedral towns, are said to have appreciated sound port wine, which retains its old pretensions to orthodoxy; but the temperance of the clergy of the day is beyond question, and neither they nor the well-bred classes of society usually drink spirits or wine without solid food. At the ages in the prime of life, Protestant ministers are nearly as healthy as the clergy of the Anglican church.

I may cite many other classes who drink in moderation, such as carpenters, or again, agricultural laborers who drink beer, but whose means are limited, and who in the country are less exposed to temptation. Their

* See Lectures by Dr. Thomas Watson on the Principles and Practice of Physic, Vol. I., p. 407.

† Ramazzini *De morbis Artificum* Ed. 1717, Genevae, cap. xx.

mortality does not at all approach that of the publicans and spirit dealers. All scientific observation goes in favor of temperance in drinks. As habitual drink alcohol is the most dangerous; wine and ale the most medicinal.

A Committee of the House of Lords has sat, the Duke of Westminster in the chair, to inquire "into the prevalence of Habits of Intemperance, and "into the manner in which those habits have been affected by recent "legislation, and other causes." The report is valuable in its scientific evidence as giving the results of the most recent research. The opinion that alcohol is always eliminated by the organs unaltered is refuted. Experiments upon animals and man, as for example, "the experiments of Professor Binz, of Bonn," clearly prove, says Dr. Burdon Saunderson, "that "there is no disengagement of alcohol by the breath, unless the quantity taken "is above a certain ill-ascertained limit; that limit is about *two ounces* " [of absolute alcohol]. That is to say, that an ordinary man may take as "much as *two ounces* of alcohol, and the whole of the alcohol will be "oxidised."* Qu. 9384. It is to that extent food; the oxidation produces some of the forms of force. Dr. Brunton asserts that alcohol in small doses increases the gastric secretion, and thereby aids digestion; it is then absorbed into the blood; it increases the action of the heart, and dilates the fine vessels, so that the warm blood from the interior of the body pours over the surface and gives a feeling of pleasant warmth and comfort. In the end as more blood is at the surface when the external air is extremely cold the person may be chilled down and die in consequence of the cooling. Such is Dr. Brunton's view.† That can only result from excess. It is evident that chemistry and physiological reasoning throw much light on the action of alcohol. But experience, which may be held to be a series of experiments, can alone determine the precise effects of food and drink of different kinds on the forces and health of men. Wine and ale contain different kinds of alcohol, æthers, and other organic compounds; but the predominating spirit is æthylic or common alcohol (C_2H_6O). "Pure "alcohol gives no taint to the breath, and good alcoholic liquids only "leave that smell which belongs to their ethers."‡ Some of the alcohols are extremely noxious. The wines are subject to changes, which Pasteur calls diseases of wine, and traces to different kinds of ferments.§ This explains some of the sad effects of bad spirits and wines on the people who drink them. Dr. Parkes shows in his experiments that good claret up to a pint had no sensible effect on the temperature of the interior of the body, but it raised the pulsations of the heart from 76·3 to 80·5. The psychical effect of the claret is not recorded; but 4 to 8 ounces of alcohol in the 24 hours produced torpor and sleepiness.||

It is impossible to discuss the whole of the effects of alcoholic drinks—spirits, wines, and ales of such various qualities—on life and on disease. The facts I have in the reports are a contribution to the further investigation of this very important subject; connected as it is with health, crime, insanity, and the subsistence of families. It is not a mere Public House question; but even in that aspect it is not unimportant as a political inquiry. I will only state here briefly the practical results of the investigations up to this time bearing on the causes of death.

* Reckoning 1 part of sherry as 0·20 of alcohol, there are about 2·4 oz. of alcohol in half a bottle of sherry. It is the limit. Two to three glasses of sherry, three to four of claret, are average doses. For the bottles of past times put glasses, and you will be probably right; but the true standard is learnt by watchful experience.

† See Evidence before Lords' Committee. Qu. 9246-9378. It is borne out by the experiments of Binz in the paper cited below.

‡ Effects of alcohol on warm-blooded animals. By C. Binz, M.D., *Journal of Anatomy and Physiology*, vol. VIII., pp. 233-41. He shows by experiment, as Todd had, that in fever alcohol reduces the temperature.

§ See Pasteur, *Maladies des Vins*.

|| See *Proceedings of Royal Society*, vols. 18 and 19.

Food (1) nourishes the body, replacing waste denoted by urea, and keeps the blood and all the tissues in a suitable fluid, physical condition; (2) it generates heat, which is in proportion to the amount of oxygen consumed—carbonic acid and vapor exhaled; (3) it sets free muscular force; and (4) finally it acts on the mind or generates psychical force. Water, milk, wheat, oats, rice, fruits, meats of various kinds suffice for the first three purposes; but under the fourth head these elements are supplemented by coffee, cocoa, tea, tobacco, spices, wines, and spirits. They directly affect the brain and nerves. Grape, hop, and barleycorn thus find a place. Their effects are not learnt from chemistry but from the senses, of which the poets of all ages and philosophers are natural expositors. In the arts—in music, science, eloquence, poetry,—soul sets soul in motion through etherial mediums; but material stimulants also play their part in the emotions of the loftiest as well as the lowest orders of mind. The Symposium of Plato gives us accurate ideas of the habits of the finest minds of Greece in the age most renowned for arts and eloquence; and the philosopher puts dramatically in the dialogue wise words in the mouth of the physician Eryximachus.

Agathon the poet celebrated a banquet, and offered up his sacrifice of victories won “in the presence of more than thirty thousand Hellenes.”

“Then said Eryximachus, the weak heads like myself, Aristodemus, Phaedrus, and others who never can drink, are fortunate in finding that the stronger ones are not in a drinking mood. (I do not include Socrates, who is able either to drink or to abstain, and will not mind, whichever we do). Well, as none of the company seem to drink much, I may be forgiven for saying, *as a physician, that drinking deep is a bad practice, which I never follow, if I can help*, and certainly do not recommend to another, least of all to any one who still feels the effects of yesterday’s carouse.”

The speeches of unsurpassed eloquence then commence and go on, till Alcibiades enters drunk, and insists that the rest shall drink too. The wine cooler holding two quarts* which had caught his eye was filled and emptied; and then refilled for Socrates, who drank it off. “My device,” said he, “will have no effect on Socrates; for he can drink any quantity of wine and not be at all nearer being drunk.”† The Symposium was then an established institution.‡ Lycurgus is said to have rooted up the vine; and Sparta had no drama, no art, no science. In Italy Horace and Cato alike were inspired by the Amphora.§

The great Elizabethan school of dramatists, which culminated in Marlow, Shakespeare, and Ben Jonson, was equally famous for its genial cups. “What things have we seen done at the Mermaid,” writes Beaumont to one of the wits of his day. And the English statesmen, famous for eloquence in Parliament, drank wine freely in the last and the present century. Burns, Byron, and some modern poets took at times wine or spirits perhaps too freely. The Noctes Ambrosianæ of Christopher North, written in the heyday of modern Athens, could scarcely have been conceived under the inspiration of water. They are not the dialogues of a Plato but works of genius. The Germans in the age of Tacitus, and the Northmen in their most glorious days excelled the Greeks, not indeed in art, but in drinking, and they had in them the energy that conquered Rome and the fairest countries in Europe, where their race rules to this day. Gœthe worked for six hours a morning. Adhering to the habits of his German ancestors; “he sat a long while over his wine chatting gaily to some friend or other

* Greek wine was diluted.

§ See Lib. 3. Ode XXI. Narratur et prisce Catonis.

Sæpe mero caluisse virtus.

“ (for he never dined alone). . . . He was fond of wine and drank daily his
 “ two or three bottles [of Rhine wine]. The amount he drank never did
 “ more than exhilarate him.”* Unlike Schiller he never drank wine to
 stimulate his genius. In this he was a German Socrates. The Turk is a
 negative instance, his valour is unquestionable ; he smokes, but drinks no
 wine ; he has never been famous in art, science, or industry.

Professor Binz, in his paper on some effects of alcohol, refutes the “pre-
 judice” about alcohol which he says “Shakespeare represents very
 merrily.” The German Professor falls into the common error of
 identifying Shakespeare with his characters ; the words are put into
 the mouth of Falstaff. But before quoting the passage let us hear
 Dr. Richardson on the other side, who has studied the effects of alcohol
 as a physician, and thus delivers himself.† “To have to speak of diseases,”
 he says, “originating from the use of a fluid which, next to water, forms
 “ a part of the daily beverage of immense populations of civilized people,
 “ seems a satire on civilization. . . . In whatever direction the physician
 “ turns his attention to determine the value of alcohol to man, beyond the
 “ sphere of its value as a drug which he may at times prescribe, he sees
 “ nothing but a void ; in whatever way he turns his attention to determine
 “ the persistent effects of alcohol he sees nothing but disease and death ;
 “ mental disease, mental death ; physical disease, physical death.
 “ The effects produced by alcohol are common, as far as I can discover,
 “ to every animal. Alcohol is a universal intoxicant, and in the higher
 “ orders of animals is capable of inducing the most systematic phenomena
 “ of disease. But it is reserved for man himself to exhibit these phe-
 “ nomena in their purest form, and to present through them, in the morbid
 “ conditions belonging to his age, a distinct pathology. Bad as this is, it
 “ might be worse ; for if the evils of alcohol were made to extend equally
 “ to animals lower than man, we should soon have none that were tame-
 “ able, none that were workable, and none that were eatable.
 “ The true place of alcohol is clear ; it is an agreeable temporary shroud.
 “ The savage, with the mansions of his soul unfurnished, buries his restless
 “ energy under its shadow.”

So far Dr. Richardson who hates alcohol as he thinks with good reason.
 Now turn to Falstaff a philalcoholist, if there ever was one. The Duke of
 Lancaster, sober-blooded, is evidently a total abstainer, he doth not
 love Falstaff : “A man cannot make him laugh, but that’s no marvel ;
 “ he drinks no wine. None of these demure boys come to any
 “ proof they fall into a kind of male green-sickness [become
 “ anæmic]. A good sherris-sack hath a twofold operation in it.
 “ It ascends me into the brain ; dries me there all the foolish and dull and
 “ crudy vapours which environ it ; makes it apprehensive, quick, forgetive
 “ [inventive], full of nimble, fiery, and delectable shapes ; which delivered
 “ o’er to the voice becomes excellent wit. The second property
 “ of your excellent sherris is the warming of the blood.” Here Binz
 says, Falstaff is wrong ; but although alcohol in the end cools the blood
 by some degrees in the drunkard, it at first warms the surface, “it illu-
 “ mineth the face, and then the vital commoners and inland petty
 “ spirits muster me all to their captain, the heart, who, great and puffed
 “ up with this retinue, doth any deed of courage ; and this valour comes
 “ of sherris. Hereof comes it that Prince Harry is valiant.
 “ If I had a thousand sons, the first humane principle I would teach them
 “ should be, to forswear thin potations.”‡ The two Orators have a great
 deal more to say for their extreme opinions ; the philalcoholist sees good,
 the misalcoholist sees all evil, in wine.

‡ See Henry IV. Part 2, Act IV., Scene 3.

Shakespeare knew all about the effects of wine, which are described by his various characters high and low. It is a mark of his dramatic genius that each person speaks in character: Hamlet denounces the "rouse" of the traitorous king; "it is better honoured in the breach than the observance:" Cassio who had "unhappy brains for drinking" and had just been cashiered sees all its evils; "O that men should put an enemy in their mouths to steal away their brains! that we should with joy, pleasance, revels, and applause transform ourselves into beasts. Every inordinate cup is unblest, and the ingredient is a devil." Dr. Richardson can say nothing stronger. Then the final words are dropped, "Come, come, good wine is a good familiar, if it be well used."

It is a remarkable fact, but quite natural, that physicians and clergymen who have seen so much of the evils of drink, and men who have suffered from them, should speak in the strain of Cassio. They speak with weight. And as there are men of weak heads, incapable of self-control, the Church of England Temperance Society offers them judiciously the pledge of total abstinence. This pledge taken during the youth of both sexes, cannot but be beneficial; *fruit*, bread, meat, potatoes, milk, sugar, water suit them then better than fermented liquors.

Drunkenness, unlike gluttony, is a public scandal; and we find in 1876 that in the Metropolitan Police District 32,328 charges of drunkenness with or without disorder were made. Upon the one hand it is contended that the same person is charged two or three times a year, so that the number of *persons* drunk and disorderly annually may be reduced to more than half the above number; and upon the other hand it is known that many persons drunk and disorderly are never charged at all. Taking it that 32,328 *persons* were disorderly drunk in the year, then 4,179,279 were sober, and not in a state to disturb the public peace.* In the month of June 1877 the number apprehended as drunk and disorderly daily was 97,† of whom 80 were convicted. Thus such drunkards in a given day were to the rest of the people of the Metropolis as about *one* to 43,419. In studying the question on both sides, it is plain that an immense majority of the people are sober. Assuming that the 32,328 represent different persons drunk, or drunk and disorderly, one day in the year, then it follows that no charge was made against them for this crime on the remaining 364 days, when the rest of the population—more than four millions in number—gave the police no trouble.

The deaths by alcoholism in the Metropolitan District were returned at 164 in the same year, when the deaths from zymotic diseases were about 18,000, and the deaths from all diseases were 89,741.

By going into prisons, police courts, and lunatic asylums, we learn much of the condition of a fraction of the population; for they are instructive schools of morbid anatomy; but a census of the whole population teaches us a different lesson, and the mind through a clear and not a disturbing medium, sees the people in their true light. I have at a society of Odd Fellows and elsewhere seen a good deal of the really working classes, as they are called, and feel convinced that it would be most unjust to charge them as a body with occasional, to say nothing of frequent or habitual, drunkenness. The Odd Fellows expel drunkards; and from an annual return with which I have been favoured by the intelligent secretary, I find that in the six years 1871–1876, when the number of members rose from 442,575 to 508,013 in the United Kingdom, 222 were expelled for various causes, including only 4 for drunkenness—less than *one* annually. The Foresters with 509,519 members have not furnished me with returns, but from all I can learn, they are also as a body equally temperate.

* See Report of Lords' Committee on Intemperance, vol. I., p. 342; vol. III., p. 313.

† The greatest number was apprehended on Saturdays, 141, the smallest number on Fridays, 70. See Third Report of Lords' Committee on Intemperance, p. 315.

Canon Ellison, Canon Duckworth, and other devoted members of the Church have themselves taken the abstinence pledge: believing in the doctrines, and bent on calling sinners to repentance, they have reclaimed considerable numbers of drunkards.

The Church Society was established in 1861 as a purely total abstinence society; but in 1873 it was, under the auspices of the archbishops, placed on a broader basis more in accordance with the moderate principles of the English Church. Its object is to promote temperance in every way, without insisting on the pledge of abstinence. This, I venture to say, opens a wider, a more rational, and a more practical field of usefulness.

A large number of people now abstain altogether from alcoholic drinks, especially in towns; and those who uphold this course—some of them eminent in science—will, through the agency of the Temperance Society, be able to collect extensive observations, and to prove that men can live and enjoy health in towns without any fermented liquors. They will also be able to show, as I have, that any excesses injure health.* What is wanted is a scientific inquiry into the mortality of a large body of total abstainers. Why does not the United Kingdom and General Provident Institution publish the results of such an inquiry which its actuary, Mr. Hardy, is so competent to conduct? Its experience is extensive; and might be compared with the experience of other offices of the same standing.

I will now state my reasons for believing that the present mixed dietary of wines and ales, in due proportion with vegetable and animal food, while it yields the maximum energy of life, is conducive to its duration.

I will first notice a fallacy in some reasonings on the subject. Alcohol in excessive doses produces death and its effects are traced through the various organs of the body. On such a basis this is the reasoning. Alcohol in given repeated doses is fatal; therefore in every dose it poisons men quickly or slowly according to circumstances. It is always a poison. Test this argument on the active remedies of the pharmacopœia. Take arsenic; in doses of ten grains it kills a man in excruciating agony in a few hours. In small doses has it any injurious effect? None whatever. On the contrary, it restores or preserves health. Fowler's arsenical solution cures ague. Sulphuric acid is according to the dose a corrosive poison, or a remedy for the diarrhœa premonitory of cholera. Opium puts out life or simply soothes and sends sufferers to sleep. Chloroform kills *one* patient in a thousand, but it quells pain in tens of thousands and is otherwise harmless, so it is still administered in surgical operations. Excess in meats of any kind induces indigestion; and over-feeding is probably as fatal as over-drinking; yet no one advocates entire abstinence from food; and only vegetarians abstain from animal food: ascetics justly call fasting *mortification*. Love, as well as wine, is sung by the poets; but it has its fatal abuses; yet no one on the strength of these abuses has counselled total abstinence from marriage. It is quite possible, then, in accordance with these analogies that wine in excess might be a poison, and *in limited doses* a virtuous delight to divines, doctors, prophets, and princes. Instead of shortening it might lengthen life. The ancients who created symbols of mental states in their mythology represented Dionysus as the graceful, beautiful youth of Greek art, wandering about with Ariadne (why not with Ceres?) at one time, and at another time figuring as the riotous Bacchus drawn by panthers in the midst of frantic bacchantes followed by the besotted Silenus on his ass. In some places he was the physician, the healer, the saviour, the inspired or inspiring god.†

Alcohol has undoubtedly a medicinal effect in many maladies; it stimulates the fainting heart after shocks of every kind. Port wine is a potent

* See Dr. Richardson's Six Cantor Lectures on Alcohol delivered before the Society of Arts; and "Temperance and Abstinence" by Dr. W. B. Carpenter, F.R.S.

† *ἰατρός, ὑγιατῆς, θεὸς σωτήρ.*

remedy in fevers ; instead of raising it reduces the burning heat of the blood, and calms the delirium of the brain. Alcohol appears to arrest the action of zymotic diseases ; as it prevents weak wines from fermenting. Like camphor, alcohol preserves animal matter ; this is not now disputed. But may it not do more ? May it not prevent the invasion of some kinds of zymotic diseases ? I invite the attention of those who have portrayed the bad effects of alcohol to consider whether it does not prevent the action of various infections on the temperate. The neglect of this side of the question throws a doubt on many of their inferences. The deaths ascribed to zymotic disease in 1876 were 96,660, to alcoholism 1120 ; now it is evident that any effect depressing the prevalence of zymotic diseases that kill their tens of thousands will save the lives of thousands : the same sanitary improvements that diminish the prevalence of disease undoubtedly diminish intemperance and feverish thirst.

Experience that speaks so strongly against excess speaks as decisively in favor of the use of wines which I take as the type of alcoholic drinks. The experience of mankind is in its favor. Wine is taken generally at and after meals in society, when indeed there are no *Symposia* or *Noctes* with Plato and Christopher North for reporters, but common conversation, and at public dinners, after-dinner speeches which are often amusing and in England sometimes eloquent. The dinners at the Mansion House and in the halls of the City Companies are examples ; so are the banquets in support of hospitals, literature, science, and charities ; so are the club dinners in connection with the meetings of learned societies. Dr. Richardson, like Luther at the diet of Worms denouncing Indulgencies in the presence of the Emperor, would dash down the cups before the Lord Mayor and the Masters who are supposed to be able to judge of the effects on their health of what they eat and drink. He denounces alcoholic drinks altogether ; the Sage suppresses neither the cellar nor the kitchen, but insists on the temperate use of the contents of both. The temperance which is now the rule in the cultivated classes and the provident orders of all ranks, will, we may hope, reach in the end the whole of the community. Education will supply the mind with natural stimulants ; and science will teach wine-bibbers who sin from ignorance, as some among the publicans do, like Van Dunck never drunk but drinking spirits daily, that their life breaks down inevitably under such a system. They will then leave no longer so many widows. The grocers as well as the publicans will be alive to the dangers of the spirit trade. It is a remarkable fact that the official returns show that the mortality of grocers was at every group of ages much higher in the year 1871, after they had begun to retail spirits, than it was in 1860-61 ; see table below.* The deaths from alcoholism among the other classes in that year were nearly the same as they were in 1860-61.

* MORTALITY per Cent. of GROCERS, 1860-1 and 1871.

AGES - -	15-	25-	35-	45-	55-	65-	75 and upwards.
Years 1860-1 - -	·531	·840	·923	1·280	2·053	4·334	12·488
1871 - -	·592	1·115	1·021	1·466	2·567	5·461	13·442
Excess in 1871 - -	·061	·275	·098	·186	·514	1·127	·954

NOTE.—In 1860 an Act of Parliament was passed by which, for a license of £2 2s. or £3 3s., according to rental, grocers or dealers in other commodities than wines and spirits might sell *wine* in quart or pint bottles in any quantity less than two gallons not to be consumed on the premises ; previous to that year the license was £10 10s., and the quantity was unrestricted. In 1860 also an Act of Parliament empowered licensed dealers in spirits (grocers among others) to take out a license, additional to the £10 10s. license for spirits, authorizing them to sell *foreign liquors* in reputed quart bottles or bottles in which the same may have been imported ; while a further Act passed in 1861 allowed the sale of Foreign or British Spirits in any quantity not less than one reputed quart bottle. In 1872 the law compelled retailers of wines or spirits to get a magistrate's certificate prior to the grant of a license.

The clergy of the Church of England are quite justified, without insisting on total abstinence, in endeavouring to promote temperance of which they themselves experience the full benefit. The rate of mortality among publicans of 35 and upwards is 3·94 per cent.; among the English clergy it is 2·96. Their duration of life is shown below* in comparison with that of other classes. The report of the Lords Committee will no doubt be of great practical importance, and may suggest further scientific research to determine the points at which wine loses its natural virtues and becomes a poison. Dr. Parkes's careful experiments were made on a soldier not in company, and the effects on his mind were not noted; yet, that is more striking and important than the effect on temperature, and on the secretions. The effect on the brain stands before that on the heart.

In dealing practically with alcoholism two kinds of treatment are in fine distinguishable, both wisely recognised by the Church Society.

TOTAL ABSTINENCE, voluntary or enforced, is indicated in the case of the dipsomaniac; so it is in some idiosyncrasies. The savage cannot be entrusted with *fire-water* in any form; he has not learnt self-control. The same may be predicated of the roughs of Liverpool and other cities. Spirits cannot be withheld altogether from them; but the number of public-houses might be reduced in their quarters to a minimum. The publicans ask to be allowed to refuse to serve people known to them as habitual drunkards;† and their request should be conceded, coupled with the condition that where a drunkard is fined an equal fine should be imposed on the vendor of the intoxicating liquors. The teetotallers should have free scope among this class of the population; for their exertions Father Matthew and his followers deserve the highest praise.

TEMPERANCE is the more excellent way. It is rational, it is founded on experience, and it is in itself a virtue. Men have many wants: they want water, but only a certain quantity; they want wine, but only a certain quantity; they want meat, but only a certain quantity; precisely as a working steam-engine wants water and wants fuel in definite proportions. But the wonderful human machine supplies its wants automatically. It

* DURATION OF LIFE in various CLASSES of the COMMUNITY, notably in those of CLERGYMEN and PUBLICANS.

AGE. (<i>x</i>)	MEAN AFTER-LIFETIME IN YEARS AT AGE <i>x</i> .				
	By English Life Table. (Males.)	By Healthy Districts Life Table. (Males.)	Of the Clergy.	Of other Protestant Ministers.	Of Publicans.
15 - -	43·2	47·2	—	—	38·0
25 - -	36·1	39·9	42·1	41·6	31·3
35 - -	29·4	32·9	33·8	33·8	25·4
45 - -	22·8	25·7	25·7	26·0	20·0
55 - -	16·5	18·5	18·6	17·9	14·9
65 - -	10·8	12·0	11·9	11·4	10·3

The Table may be read thus:—At the age of 25 the mean after-lifetime of the Clergy is 42·1 years, of Publicans is 31·3 years, the difference in the two classes being nearly 11 years; thus the future lifetime of the Publican is one-fourth or 25·7 per cent. shorter than that of the Clergyman. The mean after-lifetime at age 25 is 42·1 years among the Clergy, 41·6 years among Protestant Ministers, 39·9 years in the Healthy Districts among populations chiefly agricultural, 36·1 years among the whole population, and 31·3 years among Publicans. Clergymen of this age have lived 25 years, and will on an average live 42 years longer, so their mean age at death is 67 years; while Publicans of the same age live on an average only 31 years longer, and their mean age at death is 56. They lose 11 years of life. At the age of 45 the mean after-lifetime of the Clergy is 25·7 years, exactly the same as that of the populations of the Healthy Districts; it is 26·0 years among Protestant Ministers, 22·8 years among the whole population, and 20·0 years among Publicans.

NOTE.—The above calculation of the mean after-lifetime is based for the Clergy on 59,084 years of life and 1105 deaths, for Protestant Ministers on 24,944 years of life and 472 deaths, for Publicans on 228,592 years of life and 7127 deaths. See Sup. to 35th Report, pp. clxxii-clxxv.

† See evidence of R. A. Cole, Chairman of Licensed Victuallers Protection Society (qu. 10,242) Lords' Committee.

has appetites ; it measures its wants ; and the more useful a thing is the more it is desired ; but the desire has to be regulated by a higher faculty ; for beyond a certain amount the good becomes evil. How can the separating line be drawn ? It differs in every man. As organisms differ, so do their wants. But there are limits to the exercise of the appetites ; and every man has to cultivate the observance of a varying standard, changing with climate and season ; he changes from day to day, and so his wants fluctuate, but there is a middle point through which temperance draws the line. There is no better exercise for this virtue than the regulation of the appetite for wine and other foods. Temperance shuns both extremes of defect and of excess, and the man who does this is trained to virtue. The clergy can inculcate temperance as a religious duty.

Virtus est medium vitiorum et utrinque reductum.*

The temperance party will have a wider field of action than the total abstainers. It has statistical science, morality, and religion on its side, Aristotle and St. Paul alike are with it. All the clergy here are at one ; while some might have scruples against the denunciation of the vine—the beneficent vine—which had been a sacred symbol ; and wine which was poured out at the first miracle and at the last supper. The archbishop, if he could not ask them to fill the loving cup with water, might well address the city companies and induce them to drink the best wines in smaller quantities. And the Church Society might even extend its principles of temperance to dishes as well as glasses ; to luxuries of every sort ; for excesses of solid food are to individuals as injurious as any other excesses.

The primary step to put a stop to deaths from alcoholism will be to secure pure air and ample supplies of pure water in every town—every house ; for bad air disorders the head ; and water, as well as wine and ale, is required for drink by men as well as by women and children. Tea, coffee, and cocoa are stimulants and will replace, but not supersede, wine, and all we have to ask the brewers is to perfect the process they have carried so far of brewing sound ale of a low alcoholic standard.† Pasteur has shown in his “*Maladies des Vins*” how wines might be matured rapidly by exposure to a high temperature ; so that the merchants might supply ripe wines at prices unloaded with the interest accumulating through many years. The noxious alcohols should be treated as poisonous adulterations.

The capital antidote to intemperance is knowledge, not merely of reading and writing, but of the bad effects of excesses of every kind. Science has on it claims which it will meet. Let us convince the publicans and the wine merchants—as I hope we are doing—that frequent drinking throughout the day kills them, cuts their lives short, and floats them from their families to the cemetery before their time, and I feel convinced Offices may then insure their lives at ordinary rates. To the grocers selling spirits and others exposed to temptation we say—Beware ; intemper-

* Horace, in his epistle to Lollius and elsewhere, paraphrases the fine passages in Aristotle on the golden “mean.”

“This, then, we must first observe, that things of this kind are naturally destroyed both by defect and excess (for it is necessary in the case of things which cannot be seen to make use of illustrations which can be seen) just as we see in the case of strength and health ; for too much as well as too little *exercise* destroys strength. In like manner *drink* and *food*, whether there be *too little* or *too much* of them *destroy health*, but moderation in quantity causes, increases, and preserves it. The same thing, therefore, holds good in the case of *temperance*, and *courage*, and the other virtues ; for he who flies from and is afraid of everything, and stands up against nothing, becomes a coward ; and he who fears nothing at all, but goes boldly at everything, becomes rash. In like manner, he who indulges in the enjoyment of every pleasure, and refrains from none, is intemperate ; but he who shuns all, as clowns do, becomes a kind of insensible man. For temperance and courage are destroyed both by the excess and the defect, but are preserved by the *mean*.” Ethics B. II., c. 3., R. W. Browne’s translation.

† The Austrian beer does not intoxicate ; why should the best English beer ?

ance brings death. Our skilled artizans are men of keen sense; their hands for fine work must be steady, and they will not with their eyes open run the risk of trembling delirium. The navy takes care of himself according to his lights; he is the last man to poison himself or to run into neck-breaking dangers if he knows it. He leaves that to his betters.

We may thus hope to see the day when the deaths from alcoholism in the returns will approximate to zero; they are declining.

II.—CONSTITUTIONAL DISEASES.

The first Order of this Class consists of the diathetic diseases. The most fatal disease presents several varieties, and affects women more than men. Its common name is cancer, to which 11,604 deaths were referred. It is a slow, chronic, painful disease, in which medicine can yet do nothing; and the surgeon's knife, except perhaps in the case of the epithelial variety, affords only temporary relief from suffering and death. The deaths under this head have increased from 4808 in 1849 to 11,604 in 1876. To 1,000,000* living, the annual deaths in the five quinquennials 1850-74 were successively 302; 327; 369; 404; 443. The mortality was 480 and 481 in the last two years. Thus increase of cancer, a strange new growth, is much more rapid than increase of population. The causes of death during the whole of the period have, in the majority of cases, been returned on medical certificates; and as the diagnosis of the disease, when affecting the uterus and internal organs, has been facilitated by the speculum and other means, the increase may be partly nominal. Diseases now referred to cancer may have been formerly undistinguished or referred to other heads. But after every allowance has been made, it is evident that there is a real increase of deaths by cancer in England. Of every 1000 deaths 23 are by cancer. It is a disease that chiefly infests men and women of mature age. Cancer demands inquiry, the more as it (1) certainly runs in families, and (2) the question may arise whether this living heterologous growth is in any other way communicable except by hereditary transmission.

The tubercular order is of pre-eminent importance. The diseases of this order were fatal to 70,179 persons of all ages, of whom 51,775 were destroyed by phthisis (consumption), 7769 by tabes mesenterica, 7546 by hydrocephalus, and 3089 by scrofula. There is one cheering circumstance about these diseases. They are to a considerable extent under control; give way to hygienic measures; and have decreased step by step during the last 27 years. The mortality was at the annual rate of 3655 in the first, 3018 per million living in the last five years; and at the rate of 2908 in 1876.

III.—LOCAL DISEASES.

This class of diseases is sub-divided into eight orders corresponding with the several organs of the body. The diseases are generally of the nature of inflammation, or the remoter consequences of that too common affection. Sometimes they are the result of chemical deposits as in calculus. They were the causes of 229,379 deaths. At the top of the orders are the diseases of the brain, spinal marrow, nerves and senses, to which 67,737 deaths were due. Next follow 31,951 deaths by affections of the heart and its appendent arteries and veins: in the five quinquennials the annual rate of mortality rose from 700 to 1196; and in 1876 the rate ran as high as 1324. Heart disease has thus rapidly increased; but the increase is at least to a certain extent only apparent, for what was once returned as

* 1,000,000 is the basis of the annual rate in this Letter unless the contrary is expressed. See Table 4, Appendix to Report.

dropsy is now recognised by the progress of pathology as due to defects of the central circulating organ.

The blood has to circulate through the lungs in every one of its rounds, and life is sustained by the incessant absorption of oxygen and the exhalation of water and carbonic acid through thin-sided air cells. Thus the respiratory system is the keystone of the arch of human life. By the affections of this system 90,034 persons died; among them 54,055 of bronchitis, 24,492 by pneumonia.

Arranging diseases in the order of their fatality two stand at their head; bronchitis and phthisis. One death in four (25·5 per cent.) of the total deaths were by bronchitis, pneumonia, and phthisis.

The stomach is the centre of the great *Digestive system*; extending from the mouth downwards, and associated with innumerable secreting glands, some large, like the liver and pancreas, others scattered over the whole intestinal surface. It pours out juices that will digest its own membranes when they are not permeated by circulating blood, and it absorbs liquified aliment. That this marvellous apparatus—through which the pabulum of life enters the system—should be subject to derangements at various stages of existence is not strange. 24,592 persons died of diseases of the digestive organs; namely, 7449 by gastritis, enteritis, peritonitis, ulcerations, 1082 by hernia, 2406 by stricture and other stoppages, 119 by fistula, 2599 by other intestinal diseases, 10,832 by liver diseases (including 523 by ascites), 96 by spleen affections, and 9 by disease of pancreas, not easily or frequently detected.

The organs through which the metamorphosed nitrogenous or phosphatic elements escape as urea or phosphatic salts, are subject to numerous fatal derangements, which have been studied carefully during recent years. Chemistry has detected the nature of some of these affections. 9889 deaths were ascribed to diseases of the urinary organs. The progress of pathology rather than the progress of these diseases may be traced in the rise of the fatal cases from 2950 in 1849 to 9889 in 1876. *Nephria* is a new name of a really newly found disease not yet thoroughly understood, first called after the name of its discoverer Bright's disease. To it 400 deaths were referred in 1849, and 4100 in 1876. Calculus on the other hand caused 219 deaths in 1849 and 242 in 1876. Cystitis has unfortunately increased, and this increase demands the attention of Operators. Diabetes was the cause of 910 deaths.

The diseases of the organs of generation were fatal to 1288 persons including 327 who died from ovarian dropsy. Thanks to Spencer Wells, and other skilful operators, the lives of many women have been snatched from the jaws of this cruel disease. The operation requires the utmost precaution and skill which cannot in all cases be commanded; otherwise we might not, when the deaths from the disease were 214 in 1849, have had to record 327 deaths from ovarian dropsy in 1876.

The organs of locomotion are subject to disease but not very often to fatal disease; 2116 persons died of diseases of the bones and joints.

The *integumentary system* on the surface of the body is subject to the most various growths, parasitic and other, in contact with the atmosphere that surrounds us. Many of these affections have disappeared with the progress of cleanliness; their germs are washed away with soap and water. If people in general—and sweating workmen in particular—could be induced to treat their skin as well as grooms treat the hides of horses, not only the common skin diseases but other infectious ailments would be diminished and might disappear. In the meantime it is satisfactory to find that we have got rid of the leprosy so common in the dark and dirty middle ages, when offensive smells were held to be odours of sanctity. 867 deaths were due to phlegmon, 382 to ulcer, and only 523 to various specific skin diseases. The ulcers of the legs of honest, hardworking laborers are not so carefully and skilfully treated as they deserve to be.

IV.—DEVELOPMENTAL DISEASES.

These diseases are incidental to the birth and growth of the body. They include premature births; and malformations chiefly in the young; atrophy and debility; old age; and childbirth, which, though not a disease, is sometimes the cause of the death of the mother.

I propose to notice this at some length.

Childbirth : how it is a cause of death.

Childbirth is a physiological process; but to the mother and the child—next to conception and death—it is the most important event in their existence. It is a revolution: (1) to the child which, after absorbing its nutriment and oxygen from the mother's blood, takes both directly from her milk, and from the air; (2) to the mother, who no longer carries her child in her bosom, but in her arms. So marvellous, however, are the adaptations of nature that the mother, with the slightest assistance, survives in the great majority of instances, and with the aid of the art of the midwife or the physician the danger is reduced to a minimum.

There is scarcely a person of note whose life—or whose mother's life—might not at one time have depended upon the skill of a midwife. Every childbearing woman looks for some help in her travail. Newton had a narrow escape. Gœthe begins his remarkable autobiography by observing that through the unskillfulness of the midwife he was born for dead, and only after manifold efforts of those around him saw the light (1749). His misadventure so impressed his grandfather Textor, the Mayor, that he introduced an obstetrician, and instituted or restored the school of midwifery in Frankfort.* What had been his danger proved a means of safety to the city. Shortly afterwards the Royal Maternity Charity was founded in London. This admirable institution was established in 1757 for the instruction and employment of midwives to attend married women in their confinements at home.

In treating of the mortality from childbirth we have to consider several cases. *Two lives* are at risk, and the following are the four possible combinations of their fates:—

- | | | |
|--|---|------------|
| (a.) The mother (m) and child (c) generally survive | - | mc |
| (b.) The mother survives (m), the child (c^1) dies | - | mc^1 |
| (c.) The mother dies (m^1), the child (c) lives | - | m^1c |
| (d.) The mother dies (m^1), and the child dies (c^1) | - | m^1c^1 † |

There is generally one *child* at a birth; but there may be two, three, or more; and they may be still-born, or die immediately after delivery, or die in the first month (called *chrisomes* in the old Bills of Mortality).

* Dichtung und Wahrheit aus meinem Leben.

† NOTE.—From the returns of the Royal Maternity Charity it appears that 9019 ($m + m^1$) mothers were delivered; 8998 (m) surviving, 21 (m^1) dying; while 9117 ($c + c^1$) children were born, of whom 8832 (c) lived, 285 (c^1) died, including 244 still-born, 41 live-born. Then before delivery we have these four probabilities:—

- | | | |
|----------|--------|------------------------------------|
| mc | ·96648 | mother and child will live; |
| mc^1 | ·03119 | mother will live and child die; |
| m^1c | ·00226 | mother will die and child survive; |
| m^1c^1 | ·00007 | mother and child will die; |

note that $(m + m^1)(c + c^1) = 9019 \times 9117$ is the divisor of the numbers from which the probabilities mc, &c. are derived.

Thus the probability that the mother will live, is $\cdot96648 + \cdot03119 = \cdot99767$; will die, is $\cdot00233$. The probability that the mother will live and the child will die is $\cdot03119$. The probability that the child will live is $\cdot96874$; that it will die is $\cdot03126$. Mother and child survive in 966 deliveries out of 1000; mother lives, child dies in 31; mother dies, child lives in 2 cases; in only $\cdot07$ mother and child die. In the case of two or more children, the problem is somewhat more complicated.

The *mother* usually survives; but in a few rare cases she dies during, or soon after, delivery, the child surviving or dying.

The cases of still-born children are not returned to this office, and the registers do not enable us to distinguish the deaths of mothers or children in the three classes (*b.*, *c.*, *d.*). The rare instances in which the mother dies and the child survives are very sad. To turn over the *black book* of the office, and to find the *death* of the young mother at a date earlier than the *birth* of the child is recorded in the *red books*, affects the coldest heart. The orphan enters life without a mother, but it lives and may perpetuate its race's virtues.

In the still sadder case mother and child are entered together in the same *black book*, which may be the only lasting proof that they have lived. Stem and seed perish together. These cases are fortunately very rare.

I have every year specially dwelt on the causes of death in childbirth for two reasons; firstly because the lives themselves are at the most precious age, and secondly because skill can do more here in averting danger and death than in other operations.

Such Deaths* are followed year by year in Table 14, which shows that in 30 years (1847-76) no less than 106,565 mothers died in childbirth; that is, 5 to every 1000 children—one to every 200 children—born alive. The proportions varied from year to year; 42 mothers died in 1857 and 69 in 1874 to every 10,000 children born alive, and these were the extreme limits. In the year 1876 the mortality of mothers was 47.

This is a deep, dark, and continuous stream of mortality. How can it be accounted for? In the present state of obstetrical science a certain number of deaths from divers causes is inevitable. There are cases which foil the most consummate skill. Then there are difficult cases which defeat the ordinary practitioner, and the instructed midwife. But great numbers of midwives have never been instructed and have never mastered their art so as to deal with intricate cases. The Obstetrical Society of London shows in its valuable Report that in the country villages from 30 to 90 per cent., in the small towns of 10,000 inhabitants 5 to 10 per cent., of the cases are attended by midwives. Perhaps as large a proportion is attended by midwives in the large manufacturing towns as in the villages. In the east end of London also from 30 to 50 women in 100 delivered are attended by midwives; in the west end of London few.†

In answer to the question "Are the women instructed in midwifery," the Committee of the Society on Infant Mortality says, "Answers in the negative have been received from all parts of the country, with the exception of Glasgow and Sheffield." From "several districts the replies indicate not merely a want of any special education, but gross ignorance and incompetence, and a complete inability to contend with any difficulty that may occur." The Committee notices that in London many women are practising who have received a certain amount of instruction at various institutions. Thus a very large number of the mothers is attended by midwives; some instructed in practice, others incompetent to deal with ordinary cases of difficulty. A large proportion of the mothers is attended by physicians, surgeons, and apothecaries; some at the head of their art in Europe, and others skilful or unskilful in various degrees. Dr. Pitman, Registrar of the College of Physicians, says, "To the best of my belief the College included midwifery as one of the subjects of its examination as early as 1518." The Licentiates of the London Apothecaries Company have been examined in midwifery since 1830.‡ There appears to have been a

* Page 279. See also Tables 12 and 13.

† 34th Report of Registrar-General, pp. 225-6.

‡ Mr. Wheeler, the Secretary of the Society of Apothecaries, states that in consequence of a correspondence between the Obstetrical Society, Sir Robert Peel, and the Company in 1829, the next printed regulations enjoined two courses of midwifery during the second year of study.

general, but not a special, examination in midwifery by the examiners in both the College of Physicians and the Hall: at the College of Surgeons the midwifery license is a distinct qualification from that of membership. It is granted by the college under a clause in the Charter of the 18th of March 1852. The license was conferred for the first time on the 1st of December 1852.

There is no examination in midwifery for the membership.

The midwifery examinations, the nature of which is published by the College, "are still in abeyance arising out of the difficulty in obtaining "examiners." Thus a registered M.R.C.S., without any other qualification, has passed no examination in midwifery. Many are in large and successful midwifery practice; others, it is to be feared, must labor under disqualifications disadvantageous to themselves and their patients.

Under this state of things *four thousand six hundred and ten* mothers died in childbirth annually in the five years 1872-6. What number of these lost lives, have we any reason to believe, would have been saved, had all been watched over by skilful midwives acting under skilful physicians?

I must here notice two remarkable institutions which have furnished returns that will enable me to answer this question. The Royal Maternity Charity was, as I have said, founded in 1757. It had in 1876 two physicians and 22 midwives (located in different parts of London) who delivered in that year 3069 married women at their own homes. The midwives are instructed by the Charity's Lecturer, Dr. J. Hall Davis. 2952 of the women were "delivered by the midwives themselves;" in 117 cases the physicians were called into consultation, either from complication in the delivery, or from serious illness before or after labour.* The cost was not more than 9s. a case. On an average a midwife delivered 134 women in the 365 days; at average intervals of less than 3 days (2·7 days); she may also have private practice. The midwives are superannuated when old. There is an auxiliary fund managed by visiting ladies; who are authorized to expend about 5s. in each case of need. "It was "painful to hear from the midwives, 'they report,' of the lamentable and "destitute condition in which some of the patients were found." Others were in better circumstances. Such is the class of cases.

Now the deaths of mothers to 9019 delivered by the Royal Maternity Charity in the three years 1875-7 were 21. The mortality was at the rate of 2·33 to 1000 deliveries. Dr. Roper, M.D., one of the physicians of the Charity says, "Our maternal mortality is as correct as possible, because "whenever a patient is taken ill after confinement, her case is followed "up either to recovery or death."†

The Birmingham Lying-in Charity was founded when the *Lying-in Hospital* of that town was broken up, and has similar rules to those of the London Maternity Charity. The mothers are attended at their own homes by four instructed midwives, acting under a Consulting Medical Board. 8607 mothers were delivered in ten years, of whom 20 died. The mortality was at the rate of 2·32 deaths to 1000 mothers delivered, or as nearly as possible the same as in the London institution. The midwives are not allowed to practise privately; and they must be fully employed, as each of the four midwives delivered about 215 women annually. The physician was called in one time in sixty. Precautions are taken against the spread of puerperal fever. The Birmingham Charity has the merit of publishing a very interesting statistical report.

At the rate of mortality among the patients of these two charities in London and Birmingham, the annual deaths by childbirth in England and Wales

* Report of Charity for 1876, p. 25.

† Letter dated March 25th, 1878.

would have been 2009 ; the *actual deaths* registered were 4610 ;* so that 2601 mothers *perish annually through* the want of such an amount of care and skill as the midwives, acting under the consulting physicians of the two charities, bring to bear in their attendance.

Some allowance should be made for the circumstance that these charities only undertake to attend *wives*, and that they have apparently fewer than usual of mothers bearing their first children (*primiparæ*). Upon the other hand, these mothers are often poor ; and I have a further careful return of 4390 cases in the private practice of Mr. G. Rigden of Canterbury, where the deaths were 9 in 4390 deliveries, or 2·05 per 1000.† Other private practitioners, keeping equally accurate accounts, could no doubt supply results equally favourable.

Childbirth is not fatal in itself, but by reason of certain supervening diseases or injuries, which should as well as “childbirth” be always stated in the medical certificate of the cause of death in conformity with the instructions in the medical certificate books in the hands of all registered practitioners. In the five years 1872–76, of the 23,051 deaths in childbirth, 10,498 were referred to *metria* (puerperal fever), 8400 to specified diseases or injuries, and 4153 to causes not specified, and therefore imperfectly certified. By distributing the 4153 proportionally over the specified causes the following approximate numbers are obtained under the several heads:—

ENGLAND and WALES—DEATHS FROM METRIA and other fatal DISEASES or INJURIES in CHILDBIRTH in the Five Years 1872–76.

NOTE.—In this Table the 4153 Deaths simply returned as in *Childbirth*, without distinguishing the precise cause of death, have been distributed proportionally over the several heads.

	DEATHS in the Five Years 1872–76.	Annual DEATHS in the Five Years 1872–76.

* See Table at foot of page 245.
† See Registrar General’s 33rd Annual Report, p. 412.

Puerperal fever is the most fatal of specified causes ; it sets in some time after delivery and has to be strictly guarded against, for it is contagious in the highest degree. Where a case occurs, the midwife of the Birmingham Charity is not allowed to attend cases for some time. Some other zymotic diseases appear to communicate infections to puerperal patients. Miscarriage and abortion are imperfect descriptions ; in themselves they are not fatal. Phlegmasia dolens and breast abscess are sequels. Embolism, and air entering the veins are rare affections ; they are not distinguished. Deformed pelvis necessarily obstructs delivery, and sometimes to a fatal extent. Cæsarian operation was fatal in 3 cases annually. For rupture of uterus before delivery there is no preventive, no cure. About 36 women die from this cause annually. Puerperal convulsions are fatal to 538, puerperal mania to 115, women yearly. Such affections are always serious complications, and in the hands of even the skilful physician are sometimes fatal.

There remain flooding before, during, or after delivery fatal to 705 ; and retained placenta fatal to 71 mothers annually under the present system of practice. These are nearly all really cases of flooding, and so are 262 cases of *placenta prævia*, making in all 1038 cases of fatal hæmorrhage. The placenta fixed over the os uteri presents to the physician extraordinary difficulties ; and bleeding goes on when it is partially detached until in some cases the clotted blood occupies the place of the child, while the serum oozes away. It is in the cases of ordinary flooding that the skilful midwife saves the mother's life. The authorities agree that the afterbirth is usually expelled in less than 20 minutes ; and that where there is delay beyond half-an-hour the utmost care is required. The removal of the placenta by pressure and by gentle mechanical help excites the contractions of the uterus and at once stops the flow of blood. If this is not done, the patient bleeds to death ; the heart, no longer filled with the vital fluid, struggles in vain ; pangs and syncope follow.

This question of the placenta is of so much practical importance in its connection with deaths by hæmorrhage that I have addressed queries on the subject to the two lying-in charities before referred to in order to

ENGLAND AND WALES. — ANNUAL DEATHS of MOTHERS to DELIVERIES, 1872-76, according to the Mortality among (1) the Total Population ; (2) patients of the Royal Maternity Charity of London ; and (3) patients of Mr. G. Rigden, M.R.C.S., of Canterbury.

* The deaths of Mothers according to the experience during ten years of the Birmingham Lying-in Charity would be 2004.

NOTE.—The women attended in the above period by Mr. Rigden numbered 4390, of whom 9 died. They were of all classes above paupers ; and Mr. Rigden states that he keeps a record of all midwifery cases, noting the peculiarities of each case, and has them under his notice for at least two weeks, or longer if he has reason to fear unfavorable symptoms. As his attendance is private and entirely unconnected with any lying-in charity, his experience embraces a due number of first confinements.

ascertain the actual prevailing practice among their instructed midwives ; and the following are the answers with which I have been favoured :—

The following questions were addressed to Dr. J. Hall Davis, M.D., F.R.C.P., the physician and lecturer to the Royal Maternity Charity. The following are his replies :—

[NOTE.—Cases of placenta prævia are excluded from this inquiry.]

Question 1.—What is your general practice as to the placenta, when it is retained, say an hour? And what time generally elapses before you think it necessary to interfere?

When the placenta is retained within the uterus for an hour, we then counsel its removal at the end of that time. Should, however, hæmorrhage take place, I advise its removal forthwith. If it is not morbidly adherent, it is best removed by grasping the uterus and expressing it. I am opposed to the removal of the afterbirth by dragging at the funis. If there should be difficulty from morbid adhesion of placenta or spasmodic contraction with or without hæmorrhage, the midwife is required to call in one of the physicians or a neighbouring surgeon.

Question 2.—In such cases what precautions do you take to guard against hæmorrhage—internal or external?

Grasping pressure on uterus ; and if from history of former labours hæmorrhage is anticipated, ergot (liquid essence) should be given towards the close of the second stage. Ice will be useful in some cases passed into the vagina, or applied to the hypogastrium. Injections of ice cold water into the rectum. If the placenta is not thrown off it should be removed at once.

Question 3.—What leads you to suspect internal hæmorrhage?

An enlarged flabby uterus, pallid face where previously it was not pallid, a weak, intermittent, or extinct pulse at the wrist, sighing, gaping or yawning, extreme restlessness (*jactitatio*). The introduction of one or two fingers into the uterine cavity finds an obstructing clot at os uteri, sometimes in upper part of vagina also, and an accumulation of coagulated blood within the uterus. These must be removed, and if hæmorrhage continues with relaxed uterus, an injection into the uterus of cold water or of a solution of perchloride of iron should be resorted to.

By the courtesy of J. D. Goodman, Esq., the Chairman of the Board of the Birmingham Lying-in Charity, similar questions were addressed to the four midwives of the Charity. The following are their replies* :—

Replies to Question 1 :

Answer from A.—I do not remember ever having a placenta retained an hour without its being necessary to interfere ; it would be impossible to put a limit as to time ; sometimes hæmorrhage takes place immediately after birth, sometimes not for 20 minutes or half an hour ; directly I perceive any sign of loss I should insert my hand and remove it.

Answer from B.—I introduce my hand and take the placenta, after waiting 45 minutes. If hæmorrhage sets in I should interfere at once, if no hæmorrhage I should wait, as stated, three quarters of an hour.

Answer from C.—If there is no hæmorrhage I should not interfere with a case of retained placenta under two hours ; I should then insert my hand and extract placenta.

* The following are the names of the four midwives who furnished the above information : U. Phillips, M. Whittock, M. Francis, and M. Humfrey. The four honorary surgeons to the Birmingham Lying-in Charity were Dr. T. Savage, Dr. E. White, Mr. T. H. Ravenhill, M.R.C.S., and Mr. W. S. Mann, M.R.C.S.

Answer from D.—In my general practice, if the placenta is not expelled spontaneously within 15 to 20 minutes after the birth of the infant, I take measures to withdraw it, observing due precaution in so doing.

Replies to Question 2 :

Answer from A.—By firm pressure on the uterus, and give the patient \mathfrak{m} xv of liq. ergot in water.

Answer from B.—If patient has suffered at her previous confinement with hæmorrhage, I give ergot before the birth of the child; this refers to external hæmorrhage. I never had a case of internal hæmorrhage; and if I met with such I should at once send for medical assistance.

Answer from C.—To guard against hæmorrhage I press the abdomen.

Answer from D.—I excite uterine contraction manually and ergotically, and if I suspect internal hæmorrhage, I explore the uterus and remove the placenta membranes and coagula, and bind and compress the uterus as soon as I have swept its cavity. The signs that lead me to suspect internal hæmorrhage before the expulsion of the placenta are distension of the uterine walls, loss of contractility, and a peculiar action of the uterus by which it fills and refills with blood even with firm pressure upon the fundus.

Replies to Question 3 :

Answer from A.—The uterus becomes much distended, and the patient becomes faint, frequently sick, her face becomes livid. I should also judge from the state of the pulse.

Answer from B.—I should ascertain internal hæmorrhage by the state of the pulse, fainty appearance, and such like indications, enlarged state of abdomen, and from the state of the uterus.

Answer from C.—Patient appears faint, the abdomen enlarged, and the state of the pulse.

Answer from D.—On the part of the patient symptoms of syncope, pallor and coldness of the skin, serious loss of blood, with other general symptoms.

The replies of the midwives of the Birmingham Lying-in Charity to the questions submitted by Dr. Farr having been read, it was resolved, at a meeting of the Medical Board, held March 21, 1878 :—

In considering the replies of the midwives, this Board is of opinion that on the whole they are satisfactory, and may fairly be considered to account for the successful practice of the midwives of this Charity in the cases where the complication of retained placenta has been present.

Only in cases of such extreme urgency as severe hæmorrhage, and when the services of the medical officer cannot be very quickly obtained, does this Board consider it justifiable for the midwife to introduce the hand into the uterus.

Celsus, at the date of the birth of Christ, thus describes the Roman treatment of the afterbirth, which appears to have been perhaps too summarily removed; but the description of the operation is very brief :

Quoties autem infans protractus est, tradendus ministro est. Is eum supinis manibus sustinere; medicus deinde sinistra manu leniter trahere umbilicum debet, ita, ne abruptat, dextraque eum sequi usque ad eas, quas *secundus* vocant, quod velamentum infantis intus fuit; hisque ultimis apprehensis, venulas membranulasque omnes eadem ratione manu diducere a vulva, totumque illud extrahere, et si quid intus præterea concreti sanguinis remanet.—*A. Corn. Celsi Medicinæ. Lib. vii. cap. 29.*

Mr. G. Rigden of Canterbury, whose returns have been quoted, thus replies to these queries :

[Mr. Rigden distinguishes “retained placenta” in the earlier months from the same retention in full term cases, with which alone we have now to do.]

Answer to Question 1 :

After the patient has had a little rest, or certainly within half an hour, I proceed to remove the placenta; I remove it at once if there is hæmorrhage; 1st. by grasping the uterus through the abdominal walls, and 2nd, if necessary, by insinuating my hand into the uterus, and thus removing it.

Answer to Question 2 :

I invariably apply a *binder* immediately after the expulsion of the child, and if there is fear of hæmorrhage apply a large pad between it and the abdomen over the region of the uterus.

Answer to Question 3 :

I have not met with such cases for several years past ; but should there be much faintness after labour, I should be particularly careful in examining the uterus both externally and internally. I should remove any clots that were in the uterus, and would prefer injecting warm water at a temperature rather above 100° to any other injection.

The books and manuals on midwifery in English and French are now very much at one on this question. It must be so. The vessels of the uterus are in direct communication with the mother's heart. They are naturally torn and closed by the contraction of the uterus. So long as any portion of the placenta remains in the uterus complete closure is impossible and hæmorrhage is imminent. After a slight rest if contraction be not spontaneous it is provoked by pressure above and by the removal of the afterbirth. The womb then does its duty and every open vessel is sealed. A judicious practitioner like Mr. Rigden proceeds to remove the placenta within half an hour. The Obstetrical Society, in "Suggestions to the Medical Council with reference to Duties of Midwives," proposes to make it a regulation that in labor the midwife shall "send for help" "in every other case where any symptom appears indicating exhaustion or threatening *danger* either to mother or child; and specially in every instance in which the *afterbirth* is not expelled within *half an hour after the birth of the child.*"

The following is an instance of a different practice which was brought under the notice of this office. It throws light on some of the deaths by hæmorrhage. A death from childbirth occurred in the Outer Ring of London on January 13th, and inquiries were made of the Registrar. He writes on the 24th, or 11 days after the death:—"This evening I have just registered a death from childbirth, and enclose the certificate." Omitting names, the certificate runs thus:—

I hereby certify that I attended _____ whose age was stated to be 29 years; that I last saw her on the 13th day of January 1878; that she died on the 13th day of January 1878 at _____; and that to the best of my knowledge and belief the cause of her death was as hereunder written :

(a) Childbirth; (b) extreme exhaustion; (c) from anæmia of the heart (4 hours).

Witness my hand this 13th day of January 1878.

_____ Registered qualification L. R. C. S. E.
Residence _____.

"*Anæmia of the heart*" is an unusual term, and further inquiry was made; it apparently meant "absence of blood from the heart" which could only have resulted from hæmorrhage; but this was not explicitly stated. The L. R. C. S. E. expressed the greatest sympathy with the father of the lady as she was a personal "friend of my wife and myself." He attended promptly and the fine child was safely born after a short, natural, labor. In such another case he would, he writes, certainly adopt the same kind of treatment. The following history of the case is given in the husband's sad, but simple, words.

It should be stated that the delay, to be much regretted in the registration, led to the burial without a registrar's certificate by the curate of the Rev. _____ of _____ in the small cemetery of that place. In sudden deaths inquests may be held; and registrars are instructed to communicate with the coroners in certain cases; on this account the death should invariably be registered before burial as an inquest can only be held on "view of the body."

EXTRACT FROM HUSBAND'S LETTER, March 12th, 1878.

On Saturday evening January 12th, about 10 o'clock, Dr. — saw my wife in her bedroom, upon which he told me that she was approaching her confinement very satisfactorily, that the child might be born at midnight or thereabouts, and that he would not go to bed, but be ready at a moment's notice; that as nurse was watching the case there was no need for him to remain, and he went back to his house. About 2 a.m. on the 13th he was again with my wife, and 20 minutes after I heard the cry of the child. I stood outside the bedroom door listening, and heard her speak with a firm and cheerful voice, "O nurse, what is it? a girl, O I am so glad, do give me the "darling, let me kiss it," and I heard her kiss the child. She further remarked, "what a voice," meaning the child's. On one of my sisters entering the room she said to her in German, "J——, nurse wants you to take the child; isn't it a fine "baby?"

On the nurse coming from the bedroom to fetch something from another room, I asked her how my wife was, and she said, "all right, of course a little faint." Nurse having returned to my wife, and given her an egg beaten up with brandy in it, I heard my wife say, "that is right, that is just how I like it, I don't like much brandy in it." The time might then have been 10 minutes to three o'clock, or quite three o'clock.

About 20 minutes or so later, upon some remark of the Doctor, I think I heard my wife say, at any rate the nurse afterwards stated that she did, "wasn't I brave, you "will tell, nurse, my husband how brave I was." A little while after I heard my wife say, "Oh, I am so hot, nurse, fan me a little."

The bedroom door was ajar, and I heard my wife say, "Oh, what a pain," and the Doctor ask "where?"

I was told afterwards that she pointed to her chest, or said "in my chest." I think it was then that she asked, "am I flooding Doctor, if so, you can have ice?" Upon that he replied, "not at all, only keep quiet, it will soon be over." It might by that time have been 4 o'clock. A little while later I heard Dr. — exclaim, "good gracious nurse, "what is this?" I was afterwards told that that had reference to convulsive twitchings in my dear wife's face. Some time elapsed, when suddenly Dr. — came to me, and in a very excited state asked whether I had any Eau-de-Cologne, adding, "I am "afraid your wife is seriously ill; she has suddenly taken a very bad turn." He then urged me to run quickly and fetch his assistant, to ask him to knock at his wife's bedroom door, and to ask her for some Eau-de-Cologne. This might have been about 4.30. I returned with the assistant at exactly 5 o'clock. I looked at my watch just as we were close to my house—the assistant Mr. F. — having asked me what the time was.

As we reached the top of the staircase leading to the bedroom where my wife was, and I was about forcing my way to her, I was kept back by Dr. —, with the remark, "only wait one moment." He entered with Mr. F. — an adjoining room, and closed the door, and in a few seconds they both emerged from it and entered my wife's bedroom, I following them, Dr. — calling out "she is dead, she is dead." As I called, in my agony, my precious wife by her name, and bowed over her, though her eyes were already fixed, she made a convulsive movement with her *left* hand (for I was told she had turned herself over on the right, the opposite side she had been lying during delivery) to grasp mine. Mr. F. — tried to moisten her mouth with brandy, felt for her pulse, and for the beating of the heart, and pronounced her life extinct. While I was leaning over that precious body, I heard Mr. F. — say to Dr. —, "Haven't "you taken it away? take it away then and don't let the woman die with it in her."* Dr. — then put his hand under the bedclothes, and brought out the placenta, throwing it into some vessel, asking the nurse to remove it at once. They, Dr. — and his assistant, soon after left the house, but returned about half an hour later, took the nurse with them into the bedroom, and as I was afterwards told, bandaged the body * * *.

In recollecting her pale lips and blanched cheeks as she lay, the tears rushed to her father's eyes.

In questa forma

Passa la bella donna e par che dorma.

Such fearful cases should be judged by the Medical Council.

The 2601 deaths annually in England in childbirth over those 2009 that appear inevitable in the present state of obstetrical art are found in all classes of life; for Byron wrote in error when in the stanzas on the death of the Princess Charlotte he sang, "Peasants bring forth in safety." This lady had studied in Cambridge for three years, and the principal of — Hall writes

* The fact that the afterbirth was removed at this time is confirmed by the evidence of the assistant and the nurse. The nurse speaks to unusual losses and clots of blood.

of her many distinctions in the University examinations.* All was dashed to the earth in three hours. It is impossible to estimate the value of such a life so precious to her parents, husband, friends by whom she was beloved, and to her child, "the darling." But she had just been appointed Principal to a new Training College for Teachers at a rising salary of 300*l.* a year, and the value of that can be calculated. It was not less than 2,900*l.*; that sum might have been claimed from the directors of a railway company for such a life lost by the accidental negligence of one of their servants.

What the economic value is of all the women's lives lost annually by uninstructed midwives, or unskilful surgeons it is impossible to calculate, without investigating the facts of each case. It must be large. This is one example.

The new Medical Bill, clause 24., prescribes a special examination in midwifery for women. And some suggestions which that admirable institution, the Obstetrical Society of London, has offered, have been discussed recently by the Medical Council in conjunction with the clause of the Bill in a tone not offering much encouragement to the promoters of improvement. The Council can do little that is effectual. The conjoint scheme, in which the license to practice will be through a common door, prescribes an examination in midwifery; and will obviate one great default which the Royal College of Surgeons has not yet succeeded in rectifying under its charter.

The number of liveborn children registered in 1876 was 1,155,186 in the United Kingdom; of whom about 173,278 belonged to the middle and upper, and 981,908 to the lower, classes of society. Certain additions should be made for the cases of still-born children. But assuming that 30 per cent. of the mothers registered were attended exclusively by medical men, 687,336 will remain among the lower class to be attended by midwives. In towns a midwife in full practice may attend 100 cases a year, or one every 3 or 4 days on an average; but one case a week (52 in the year) will be a fair average, so at least 10,000 instructed midwives will be required. At the Census of 1871 only 3349 midwives, such as they have been above described, are returned: 31,180 women were returned as nurses.†

It has been wisely decided by the University of London to confer the same medical degree on women after the same examination as men. So it is not now a question of sex. The M.B. or M.D. is proved by examination qualified as far as that goes to practise medicine in its obstetric as well as other branches. But we may accept the practical proposal of the Obstetrical Society to license and register midwives not versed in the full knowledge of medicine, but competent to deal with all the ordinary cases of labor. They could follow their calling at a rate of remuneration which it would be well worth the while of the working man to pay; and in cases of complication call in the help of the experienced physician. The local examination by competent boards might be in the large central or county towns. The register could be conveniently kept, with the Registrar-General's sanction, by the Superintendent Registrars; and the licensed midwives would be authorized to certify the births of the children they bring into the world.

What is wanted besides examinations are good local Schools, founded on the admirable system now in operation in London and Birmingham. The Royal Maternity Charity was founded in 1757, when, under the administration of a great minister, the population of England took a start which has continued up to the present day. This institution does not appeal to the imagination, but its utility, economy, and simplicity commend it to the minds of practical statesmen. The Duke of Wellington became its President in 1818, the year after the Princess Charlotte died, and remained

* *Journal of the Women's Education Union*, vol. vi. No. 62., 15th February 1878.

† *See Census Reports*, 1871.

its President until the year of his death (1852). He was "a liberal contributor to its funds, and a judicious dispenser of its benefits." The Duke saw its importance; midwifery had given him his Guards. It would have been difficult to get the Duke to preside over some of our sensational societies, but he at once saw that the mothers of workmen and soldiers had claims for skilful help at their homes in the sorrows of labor. It was a plain good thing that appealed to his mind. Who will perfect the work?

Two things are wanted in every great centre; (1) a Society to set midwives to work under an obstetrical practitioner charged with their instruction and guidance; to be followed by (2) a Self-supporting Society among the independent third class, who would thus provide themselves all the skilful help in childbirth their means will enable them to command. The results will amply repay the contributions.

V.—VIOLENT DEATHS.

These deaths require vigilant attention. Their causes are evident; and they are to a large extent under human control. They are incidentally due in part to the progress of the mechanic arts and chemical science. They are of five orders; the first order comprises 15,995 deaths by accident or negligence: the other four follow; *none* in England by battle; 412 by homicide; 1770 by suicide; 21 by execution. 181 violent deaths could not be classified under any of these heads, chiefly through incomplete or inexplicit returns.

The rate of mortality by violent causes was 746 in 1850-4, and 762 in 1876.

Suicide usually presents little variation from year to year. In the three quinquennials (1860-74) the suicides per *million* of population were 66.6; 67.2; and 67.0. The suicides were 1601 in 1875 and 1770 in 1876. The increase in the year was 169; 11 deaths due to gun shot wounds, 20 to poison (in spite of the Acts), 50 to drowning, 63 to hanging, 34 to other causes. Cut, stab, showed a decrease of 9. In the three years 1871-2-3 of prosperity 1495, 1514, 1518 persons committed suicide; in the three following years of adversity, when alcoholism abounded, 1592, 1601, and 1770.

The violent deaths of the first order are largely due to the mines and the railways. The particulars of each kind of death are analysed in the Tables pp. 198-221, in the hope that by pointing out the dangers to life their fatality may be diminished.

It has long been a popular notion that the East wind is noxious, and has something in it especially prejudicial to health. It has been difficult to prove it directly, as this cause is mixed up with the influence of cold and other agencies, but Mr. F. J. Williams has examined this closely, and has advanced facts in the following paper to prove that the east wind in Spring is the enemy it was suspected to be. He has also thrown new light on the causes of death among infants.

I have the honour to be,

Sir,

Your very obedient servant,

WILLIAM FARR.

To
The Registrar General.

EFFECT OF ATMOSPHERIC VICISSITUDES ON THE MORTALITY.

The difference in the mean temperature of the two years 1875 and 1876 was comparatively slight ($49^{\circ}\cdot 2$ in 1875, and $50^{\circ}\cdot 1$ in 1876), and great alternations occurred in the winters of both years, but the long continuance of east winds in the severe winter of 1875 rendered it unusually trying, and caused an excessively high rate of mortality from pulmonary diseases.

During the three months of February, March, and April of the year 1875, the wind was in the east for 32 days. In the winter of 1876 the weather was cold, and there were heavy falls of snow, but east winds prevailed during these three months for only 13 days. The chief cause, therefore, of the reduction in the death-rates of children and elderly people in 1876 was, probably, the comparative immunity from bitter east winds in the winter and spring.

TABLE A.—ENGLAND. DEATH-RATES per 1000 of POPULATION at different AGES.

AGE.			1875.	1876.	Reduction in 1876.
ALL AGES	-	-	22·8	21·0	1·8
Under 5	-	-	66·9	63·0	3·9
5—	-	-	6·7	6·2	0·5
10—	-	-	3·8	3·6	0·2
15—	-	-	5·7	5·4	0·3
20—	-	-	7·5	7·1	0·4
25—	-	-	9·5	8·8	0·7
35—	-	-	13·7	12·8	0·9
45—	-	-	18·8	17·2	1·6
55—	-	-	34·4	31·2	3·2
65—	-	-	69·4	62·1	7·3
75—	-	-	153·9	134·3	19·6
85 and upwards	-	-	327·7	277·4	50·3

The effects of such atmospheric phenomena are exhibited in the death-rates at the different ages in 1875 in the above table. The cold, intensified by the biting east wind, had apparently the effect of raising the mortality from diseases of the respiratory organs higher than in any year since the commencement of civil registration.

TABLE B.—ENGLAND. DEATH-RATES per 1000 of POPULATION from DISEASES of the RESPIRATORY ORGANS.

YEARS.	Proportional Numbers.
Mean of 5 Years 1850-54 -	2·769
„ 1855-59 -	3·155
„ 1860-64 -	3·409
„ 1865-69 -	3·418
„ 1870-74 -	3·614
Mean of 25 Years 1850-74 -	3·273
Year 1875 - -	4·354
Year 1876 - -	3·731

The difference in the mortality in the two years, at the different ages, is more accurately measured by the results in the subjoined table.

TABLE C.—ENGLAND. DEATH-RATES at DIFFERENT AGES per 1000 of POPULATION LIVING at **All Ages**.

AGE.	1875.	1876.	Reduction in Rates in 1876.
ALL AGES - -	22·82	21·05	1·77
Under 5 - -	9·04	8·52	·52
5— - -	·80	·74	·06
10— - -	·41	·39	·02
15— - -	·55	·51	·04
20— - -	·66	·63	·03
25— - -	1·40	1·29	·11
35— - -	1·55	1·45	·10
45— - -	1·66	1·52	·14
55— - -	2·03	1·84	·19
65— - -	2·34	2·09	·25
75— - -	1·84	1·61	·23
85 and upwards -	·54	·46	·08

Thus the death-rate in England and Wales at all ages in 1875 was 22·82 per 1000 of population, in 1876 it was 21·05, so the reduction in the rate in 1876 at all ages was 1·77 per 1000 of population, of which ·52 was at ages under 5 years, ·14 at ages 45 and under 55, ·19 at ages 55 and under 65, ·25 at ages 65 and under 75, and ·23 at ages 75 and under 85.

For England no returns are published showing the number of deaths registered from different causes during each month; but for London this information has been obtained approximatively for certain causes from the weekly returns, and from these results the annual death-rates from *diseases of the respiratory organs* in each month of the years 1875 and 1876, and in the ten years 1865-74, have been deduced. The subjoined

table also shows the meteorological phenomena most directly influencing the mortality from those diseases.

TABLE D.—LONDON. MORTALITY from DISEASES of the RESPIRATORY* ORGANS; MEAN TEMPERATURE and RELATIVE PROPORTIONS of NORTH and EAST WINDS in 1875-76, and in the Ten Years 1865-74.

Note.—In calculating the annual death-rate a correction has been made for the difference in the number of days in several months.

Year 1875.—In reviewing the mortality from this class of diseases in London in connexion with such phenomena, it will be observed that low mean temperature together with a long continuance of east winds preceded the exceptionally high death-rates in the winter and spring months of the year. Thus the month of December 1874 was remarkable for its low mean temperature ($33^{\circ} \cdot 2$); on some days it was 14° in defect of the average, and on one “painfully cold” day (31st December) it was as much as $16\frac{1}{2}^{\circ}$ in defect. This severe weather left its impress on the death registers, and its effect may be traced in the mortality in that and in the following month of January 1875, when the excessively high death-rate of nearly 9·0 per 1000 was recorded (see col. 2). In February the mean temperature (col. 5) was as much as $5^{\circ} \cdot 7$ below the average; in March and April it was also in defect, and the average daily deficiency for the 54 days ending 24th March was over 3° . During this period the wind was almost continuously E., or a compound of E. (col. 17), and the effect of all this is visible in the high death-rates in each of the five months from February to June (col. 2).

Year 1876.—In February the death-rate from diseases of the respiratory organs in London was very high compared with the average in the ten years 1865-74 (cols. 1 and 3), for the mean temperature of the preceding month (col. 4) had fallen below the average. Then in May the influences of low tem-

perature (col. 4) and a long period of north and east wind (cols. 13 and 16) are reflected in the high death-rates (col. 1) in that and in the following month of June, whereas a remarkably low death-rate prevailed in December, for the mean temperature of that and the preceding month had been above the average (col. 4).

CAUSES OF DEATH OF CHILDREN UNDER ONE YEAR OF AGE IN LARGE TOWNS.

The results in the subjoined table show the principal causes of death among infants in fifteen large towns in the three years 1873-5, and in the year 1876. In Birmingham, Leicester, Newcastle-upon-Tyne, Nottingham, Leeds, Sunderland, Manchester, and Sheffield, there was a considerable reduction in the mortality in 1876 compared with the average in the three preceding years.

TABLE E.—PROPORTIONAL NUMBER OF DEATHS OF CHILDREN under ONE YEAR of AGE from different CAUSES in ENGLAND, in SCOTLAND, and in FIFTEEN LARGE TOWNS, 1873-6.*

* The results for the eleven causes in the fifteen large towns are deduced from returns supplied by the Medical Officers of Health. As far as practicable differences in nomenclature have been adjusted.

Proper maternal care is the one great protection to infant life; in some cases destitution sets this aside, but the mothers of England must be looked to, as a body, to assist in the great work of removing the unfavourable conditions which are so prejudicial to the development of infant life. Sanitary measures alone will not reduce the regrettable high mortality of infants: at this tender age the health officer can do comparatively but little; it is the mothers who are responsible, and until they are alive to their responsibility and to the importance of their duty, it is feared that much of the great sacrifice of infant life which has occurred in the past will continue in the future.

In the last Report attention was drawn to the great disparity between the proportional number of deaths of infants in England and Scotland from convulsions and diarrhœa; the low proportion in Scotland being chiefly attributed by Dr. Stark to better feeding and nursing.

If, therefore, a comparatively low proportional number of deaths of infants from these two causes may be taken as an indication of good feeding and nursing, then of fifteen large towns it would appear, according to the results in the subjoined table, that infant life was most carefully nurtured and cherished in London.

Dr. Russell, the Medical Officer of Health for the City of Glasgow, has favoured the Registrar General with a return showing the number of deaths of infants in that City from different causes in the four years 1873-76.

TABLE G.—NUMBER of DEATHS of CHILDREN under ONE YEAR of AGE, and the PROPORTIONAL NUMBER to every 1000 BIRTHS ANNUALLY in the Four Years 1873-76, in the CITY of GLASGOW and in LIVERPOOL, from DIFFERENT CAUSES.

CAUSES OF DEATH.	DEATHS of CHILDREN under One Year of Age annually in the Four Years 1873-76.			
	GLASGOW. Estimated Population in 1876, 545,144.		LIVERPOOL. Estimated Population in 1876, 521,544.	
	Average Annual Deaths in the Four Years 1873-76.	Proportional Number of Deaths to every 1000 Births annually in the Four Years 1873-76.	Average Annual Deaths in the Four Years 1873-76.	Proportional Number of Deaths to every 1000 Births annually in the Four Years 1873-76.

* Including convulsions, hydrocephalus, cephalitis, brain diseases, and teething.

† Including tabes mesenterica.

In Glasgow convulsions and teething are returned under the head of nervous diseases, together with hydrocephalus, cephalitis, and brain diseases, as Dr. Russell believes “that the medical diagnosis of such diseases is not refined enough to make them separately valuable.” For the sake of comparison the causes of death in Liverpool, for these years, have been classified in the same manner, and the results in the above table show the success that has attended the Scottish method of rearing infant life in a large town, for in Glasgow there were 160 deaths of infants from all causes to every 1000 births, whereas in Liverpool the proportional number was 216. This difference is chiefly accounted for under diarrhoeal diseases, nervous diseases, and atrophy and debility, the proportional numbers for which were 59·9 in Glasgow, and 112·0 in Liverpool.

TABLE 1.—Causes of Death registered in England

NOTE.—For the causes of death in the 5 years 1838–42, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843–46.
* Order 2, comprising Violent Deaths in Battle, is inapplicable to the civil population.
† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the “Criminal Returns,” inasmuch as the executions therein recorded in each year are classed according to the dates of conviction, while the numbers in this Table are placed under the years in which the deaths are registered.

in each of the 28 Years 1849-1876.

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note on page 258.

in England in each of the 28 Years 1849-1876.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1853 these have been distributed rateably over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

‡ Average in 10 years.

TABLE 4.* (continued.) **Mean Annual Rate of Mortality in England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **25 Years 1850-74**, and in each **Quinquenniad** of that Period; also the **Rate of Mortality** in the Years **1875** and **1876**.

* The populations of these counties have been estimated to the middle of 1876 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1876. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

TABLE 7.—Deaths from Scarlet Fever in each of the Counties of England in the Year 1876, and in each of the 10 preceding Years 1866–1875.

	CLASS B. STERELMINTHA.								
	Tænia (Tape Worm) - - - - -	2	-	2					
	Hydatid in Liver - - - - -	31	13	18					

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 297) and "Index of certain Towns" (page 307).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstokey, 88.
Amersham, 139.
Amesbury, 253.
Ampthill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Aston, 388.
Atcham (Shrewsbury) 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

B

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-in-Furness, 481a.
Barrow-upon-Soar, 409.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.

Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.
Berkhampstead, 138.
Berwick, 562.
Bethnal Green, 15.
Beverley, 518.
Bicester, 150.
Bideford, 287.
Biggleswade, 171.
Billericay, 190.
Billesdon, 403.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.
Bodmin, 294.
Bolton, 462.
Bootle, 573.
Bosmere, 211.
Boston, 418.
Bourn, 415.
Brackley, 155.
Bradfield, 117.
Bradford-on-Avon, 249.
Bradford (Yorkshire), 496.
Braintree, 199.
Bramley, 499.
Brampton, 567.
Brecknock, 604.
Brentford, 125.
Bridge, 55.
Bridgend, 586.
Bridgnorth, 348.
Bridgwater, 307.
Bridlington, 524.
Bridport, 268.
Brighton, 76.
Bristol, 320.
Brixworth, 161.
Bromley, 40.

Bromsgrove, 385.
Bromyard, 341.
Buckingham, 145.
Builth, 603.
Burnley, 472.
Burton-upon-Trent, 368.
Bury, 463.
Bury St. Edmunds, 206.

C

Caistor, 425.
Calne, 245.
Camberwell, 25.
Cambridge, 178.
Camelford, 290.
Canterbury, 56.
Cardiff, 583.
Cardigan, 597.
Carlisle, 569.
Carmarthen, 593.
Carnarvon, 624.
Castle Ward, 555.
Catherington, 102.
Caxton, 176.
Chapel-en-le-Frith, 443.
Chard, 309.
Cheadle, 366.
Chelmsford, 191.
Chelsea, 2.
Cheltenham, 335.
Chepstow, 577.
Chertsey, 30.
Chester, 452.
Chesterfield, 441.
Chester-le-Street, 549.
Chesterton, 177.
Chichester, 83.
Chippenham, 244.
Chipping Norton, 153.
Chipping Sodbury, 322.
Chorley, 475.
Chorlton, 465.
Christchurch, 92.
Church Stretton, 346.
Cirencester, 331.
Cleobury Mortimer, 347.
Clifton, 321.
Clitheroe, 473.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring to the "*Abstract of Marriages*," District number 600 (see page 24); and the numbers of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the respective Tables.

Clun, 345.
 Clutton, 316.
 Cockermouth, 571.
 Colchester, 195.
 Congleton, 450.
 Conway, 626.
 Cookham, 120.
 Corwen, 619.
 Cosford, 204.
 Coventry, 393.
 Cranbrook, 51.
 Crediton, 282.
 Crickhowell, 605.
 Cricklade, 242.
 Croydon, 37.
 Cuckfield, 74.

D

Darlington, 540.
 Dartford, 41.
 Daventry, 160.
 Depwade, 230.
 Derby, 438.
 Devizes, 247.
 Dewsbury, 501.
 Docking, 235.
 Dolgelly, 621.
 Doncaster, 510.
 Dorchester, 265.
 Dorking, 34.
 Dover, 63.
 Downham, 238.
 Driffield, 523.
 Droitwich, 384.
 Droxford, 101.
 Dudley, 375.
 Dulverton, 304.
 Dunmow, 200.
 Durham, 546*a*.
 Dursley, 324.

E

Easington, 547.
 Easingwold, 527.
 East Ashford, 54.
 Eastbourne, 69.
 East Grinstead, 73.
 Easthampstead, 121.
 East Preston(Worthing), 81.
 East Retford, 428.
 Eastry, 62.
 East Stonehouse, 278.
 East Ward, 574.
 Ecclesall Bierlow, 507.
 Edmonton, 128.
 Elham, 64.
 Ellesmere, 354.
 Ely, 181.
 Epping, 186.
 Epsom, 29.
 Erpingham, 222.
 Eton, 140.

 York, 515.

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	194; 5	Barton . . .	Glanford Brigg	426; 3

TO

REGISTRAR-GENERAL'S THIRTY-NINTH ANNUAL REPORT AND APPENDIX.

NOTE.—Rep. refers to the Report ; Prel. to the Preliminary Tables ; and App. to the Appendix.

	PAGES
Act, Amendment of the Registration, working satisfactorily	v
AGES of Persons married in 1876	xvii-xx
at Marriage ; improvement in the Returns, 1857-1876. (Table 9. —Rep.)	xvii
Imperfect Returns of 1874 and 1876. (Table 10.—Rep.)	xviii
Mean Age at Marriage	xviii
Mean Ages at Marriage, distinguishing Civil Condition, &c. (Tables 11-12.—Rep.)	xix
Proportions per cent. of Minors married, 1841-76. (Table 13. —Rep.)	xx
Mortality of Males and Females at different Ages in England in the Year 1876, and the average in 25 Years, 1848-72. (Table 19. —Rep.)	xxviii
Deaths of Males and Females registered at different Ages in England in each of the Years 1838-76. (Tables 21, 22.—Prel.)	lxviii-lxix
Mortality of Males and Females at 12 groups of Ages in England, 1838-76. (Tables 23-26.—Prel.)	lxx-lxxiii
Mortality of Persons, Males and Females, at 12 groups of Ages in Divisions and Counties. (Tables 27, 28.—Prel.)	lxxiv-lxxv
of 311,554 Persons married in 1876, distinguishing Bachelors, Spin- sters, Widowers, Widows	26-28
at Death of Males and Females registered in 1876 in Divisions, Counties, and Districts	121-143
at Death of Males and Females in England registered from different Causes, in 1876	145-155
at Death of Males and Females in London registered from different Causes, in 1876	156-161
(See also MARRIAGES, BIRTHS, and DEATHS.)	
ALCOHOLISM. (See also INTEMPERANCE and DELIRIUM TREMENS.)	228-239
Deaths from, of Males, Females, and Persons, at groups of Ages, 1871-3, and 1874-6. (Tables)	229
APPENDIX	223-292
APPENDIX TABLES	258-292
AREA in Statute Acres of each Division, County, District, and Sub-district	30-84
in Acres and Hectares of the United Kingdom in 1876. (Table 49. —Prel.)	xcv
of the Islands in the British Seas. (Table 51.—Prel.)	xcvi
ARMY : Strength and Mortality of the Army at Home and Abroad. (Tables 55-62, pp. c-cii, Prel.) (Table 28.—Rep.)	xxxvii
Average Strength of the British Army at Home in 1876. (Table 55, page c.—Prel.)	xxxvii

ARMY—continued.	PAGES
Average Strength and Proportion per cent. of the British Army at Home and Abroad in each of the Years 1861-76. (Table 56.—Prel.)	c
Mortality of the Army at Home in 1876. (Table 57.—Prel.)	c
Average Strength of the British Army Abroad in each of the Years 1873-76. (Table 58.—Prel.)	ci
Number of Deaths in the British Army at Home and Abroad, 1873-76. (Table 59.—Prel.)	ci
Annual Rate of Mortality per 1000 amongst Officers and Men in the Army at Home and Abroad, 1858-76. (Table 60.—Prel.)	ci
Strength at Home and Abroad in 1861 and 1871, showing the Numbers and Proportion per cent. born in the different parts of the United Kingdom and elsewhere. (Table 61.—Prel.)	cii
Deaths in Army Abroad of Officers and Men belonging to Great Britain and to England and Wales, 1858-76. (Table 62.—Prel.)	cii
ATMOSPHERIC PRESSURE in 1876	xliv
Vicissitudes, effect of on the Mortality. (Tables A-D.)	252-255
AUSTRIA; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-76. (Table 69.—Prel.)	cix
Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1853-76. (Table 73.—Prel.)	cxi
BELGIUM; Average Annual Proportion to Population of Persons Married, Births, and Deaths, 1853-76. (Table 69.—Prel.)	cix
Estimated Population; Number and Proportion to Population, of Persons married, Births, and Deaths, 1853-76. (Table 77.—Prel.)	cxiii
BIRTHS; Aggregate Number since 1837, and Annual Number 1838-1876. in 1876	v xxiii
Illegitimate; decline in the proportion of	xxiv
proportional Number of Illegitimate to 100 Births in Counties, 1856-65, 1866-75, and in 1876; and Proportion of Spinsters aged 20-40 to every 100 women living at the same age in 1871. (Table 17.—Rep.)	xxv
registered in England, and excess over Deaths, in each Year, 1838-76. (Table 1.—Prel.)	xlvi
Number of Persons living to one Birth. (Table 2.—Prel.)	xlxi
Legitimate and Illegitimate in England in 1842 and in the Years 1845-76, and Proportion of Males to Females. (Table 12.—Prel.)	lix
proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1866-76. (Table 13.—Prel.)	lx
registered in England in each Quarter of the Years 1838-76. (Table 14.—Prel.)	lxi
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838-76. (Table 15.—Prel.)	lxii
in Counties, in 1876. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Illegitimate. (Table 16.—Prel.)	lxiii
proportion of Male and Female Children born in the several Counties of England during each of the Years 1866-76. (Table 17.—Prel.)	lxiv
in Fifty large Town Districts in 1876. (Table 37.—Prel.)	lxxxiii
in Twenty-three large Towns of the United Kingdom in 1876. (Table 38.—Prel.)	lxxxiv
